- 33 Smets 2004; Van Hofwegen 2006.
- 34 Dutta i altres 2003; Sang i altres 1997.
- 35 Aquests resultats concorden amb la recerca a micronivell d'altres indicadors per a la mala salut. Segons un estudi elaborat al nord de Ghana, les taxes d'infecció per cucs eren vuit vegades superiors entre les famílies que anaven a buscar aigua de rius i rierols que les que utilitzaven aigua corrent. Aquest estudi també va descobrir que la incidència de la malaltia reportada per les famílies va passar del 5% al 24% durant els períodes d'escassetat d'aigua. Buor 2004.

- 1 Malthus [1798] 1826.  
 2 WWC 2000.  
 3 Brown 2003.  
 4 Reisner 1986.  
 5 Aquesta secció es basa en McNeill 2000; World Water Assessment Programme 2006; Postel 1992.  
 6 Rijsberman 2004c. Aquests nivells de llindar són, per la seva mateixa naturalesa, arbitraris. L'escassetat està sotmesa a grans variacions regionals a causa de factors que no reflecteixen aquests llindars. Entre aquests factors figuren l'estat de la infraestructura d'emmagatzematge d'aigua i les influències sobre la demanda d'aigua,

com ara el clima, la naturalesa i l'abast del consum productiu d'aigua i el desenvolupament dels sistemes agrícoles. No obstant això, un gran avantatge és la seva senzillesa: les dades són fàcils d'obtenir i el seu significat és intuïtiu i fàcil d'entendre.

- 7 McNeill 2000.  
 8 Shalizi 2006.  
 9 Rijsberman 2004a.

- 96 World Bank 2006a.
- 97 Maslin 2004.
- 98 Ellis, Corfee-Morlot i Winkler 2004; Ellis i Levina 2005. A finals del 2005, hi havia 35 projectes registrats sota el Mecanisme de Desenvolupament Específic (CDM), amb més de 600 de projectats. Es calculen uns fluxos financers previstos de 1.000 milions de dòlars per al CDM per al 2012. La majoria de projectes són del sector energètic, amb una elevada concentració al Brasil, la Xina, l'Índia, la República de Corea i Mèxic (que representen un 70% de l'activitat del CDM). L'únic país subsaharià que hi participa és Nigèria, que representa menys del 2% dels crèdits totals del CDM. Les iniciatives multilaterals més àmplies d'ajuda sobre l'escalfament global han estat encapçalades per la Global Environment Facility, que el 2004 havia assignat uns 1.800 milions de dòlars en subvencions per a projectes sobre el canvi climàtic, invertint quatre vegades més en cofinançament. Unes dues tercers parts del total s'han assignat a grans projectes de mitigació. Com amb el CDM, s'ha prestat l'atenció en els països en via de desenvolupament més grans, i més de 10 països han rebut més de la meitat del finançament total.

L'anàlisi de la producció agrícola a l'Índia i el Pakistan va determinar la injustícia en la distribució de la terra i l'aigua dels canals, la qualitat deficient de les aigües subterrànies (sobretot a les àrees més allunyades on la disponibilitat de l'aigua dels canals és inferior), i les pràctiques de cada explotació agrícola (la sembra de varietats més velles, l'endarreriment en la sembra i l'aplicació de mitjans de producció), com a factors clau per explicar la baixa productivitat agrícola.
