

Human Development for Everyone

Briefing note for countries on the 2016 Human Development Report

Syrian Arab Republic

Introduction

The 2016 Human Development Report (HDR) focuses on how human development can be ensured for every one—now and in future. It starts with an account of the hopes and challenges of today's world, envisioning where humanity wants to go. Our vision draws from and builds on the 2030 Agenda for Sustainable Development that the 193 member states of the United Nations endorsed in 2015—and the 17 Sustainable Development Goals (SDGs) the world has committed to achieve.

The Report explores who has been left behind in human development progress—and why. Human development progress over the past 25 years has been impressive on many fronts. But the gains have not been universal. There are imbalances across countries; socioeconomic, ethnic and racial groups; urban and rural areas; and women and men. Millions of people are unable to reach their full potential in life because they suffer deprivations in multiple dimensions of human development.

Besides mapping the nature and location of deprivations, the Report raises some specific analytical and assessment issues. To find out if everyone benefits from the human development progress, an *average* perspective is not going to work—a disaggregated approach is needed. Nor will a purely quantitative assessment succeed—qualitative aspects are needed, too. Data on agency freedom also need to be reviewed, particularly on voice and accountability. Finally, good generation and dissemination of data are important, requiring further in-depth research, experiments, consultations and alliance building among stakeholders.

The Report also identifies the national policies and key strategies to ensure that will enable every human being achieve at least basic human development and to sustain and protect the gains. And it addresses the structural challenges of global institutions and presents options for reform.

This briefing note is organized into nine sections. The first section presents information on the country coverage and methodology of the Statistical Annex of the 2016 HDR. The next eight sections provide information about key indicators of human development including the Human Development Index (HDI), the Inequality-adjusted Human Development Index (IHDI), the Gender Development Index (GDI), the Gender Inequality Index (GII), and the Multidimensional Poverty Index (MPI). The 2016 HDR introduces two experimental dashboards – on life-course gender gap and on sustainable development.

It is important to note that national and international data can differ because international agencies standardize national data to allow comparability across countries and in some cases may not have access to the most recent national data. We encourage national partners to explore the issues raised in the HDR with the most relevant and appropriate data from national and international sources.

Country coverage and the methodology of the Statistical Annex of the 2016 HDR

The Statistical Annex of the 2016 HDR presents the 2015 HDI (values and ranks) for 188 countries and UN-recognized territories, along with the IHDI for 151 countries, the GDI for 160 countries, the GII for 159 countries, and the MPI for 102 countries. Country rankings and values of the annual Human Development

Index (HDI) are kept under strict embargo until the global launch and worldwide electronic release of the HDR.

It is misleading to compare values and rankings with those of previously published reports, because of revisions and updates of the underlying data and adjustments to methodology. Readers are advised to assess changes in HDI ranks between 2014 and 2015 using column 1 and column 9 of table 1 (Human Development Index and its components) and trends in HDI values by referring to table 2 (Human Development Index Trends) in the Statistical Annex of the report. Tables 1 and 2 are based on consistent indicators, methodology and time-series data and thus show real changes in values and ranks over time, reflecting the actual progress countries have made. Small changes in values should be interpreted with caution as they may not be statistically significant due to sampling variation.

Unless otherwise specified in the source, tables use data available to the Human Development Report Office (HDRO) as of 1 September 2016. All indices and indicators, along with technical notes on the calculation of composite indices, and additional source information are available online at <http://hdr.undp.org/en/data>

For further details on how each index is calculated please refer to [Technical notes 1-7](#) and the associated background papers available on the Human Development Report website: <http://hdr.undp.org/en/data>

Human Development Index (HDI)

The HDI is a summary measure for assessing progress in three basic dimensions of human development: a long and healthy life, access to knowledge and a decent standard of living. A long and healthy life is measured by life expectancy at birth. Knowledge level is measured by mean years of education among the adult population, which is the average number of years of education received in a life-time by people aged 25 years and older; and access to learning and knowledge by expected years of schooling for children of school-entry age, which is the total number of years of schooling a child of school-entry age can expect to receive if prevailing patterns of age-specific enrolment rates stay the same throughout the child's life. The standard of living is measured by Gross National Income (GNI) per capita expressed in constant 2011 international dollars converted using purchasing power parity (PPP) conversion rates.

To ensure as much cross-country comparability as possible, the HDI is based primarily on international data from the United Nations Population Division (the life expectancy at birth data), the United Nations Educational, Scientific and Cultural Organization Institute for Statistics (the mean years of schooling and expected years of schooling data) and the World Bank (the GNI per capita data). As stated in the introduction, the HDI values and ranks in this year's report are not comparable to those in past reports (including the 2015 HDR) because of a number of revisions to the component indicators. To allow for assessment of progress in HDIs, the 2016 report includes recalculated HDIs from 1990 to 2015 using consistent series of data. For more details see [Technical note 1](#).

Syrian Arab Republic's HDI value and rank

Syrian Arab Republic's HDI value for 2015 is 0.536— which put the country in the low human development category—positioning it at 149 out of 188 countries and territories.

Between 1990 and 2015, Syrian Arab Republic's HDI value decreased from 0.556 to 0.536, a decrease of 3.6 percent. Table A reviews Syrian Arab Republic's progress in each of the HDI indicators. Between 1990 and 2015, Syrian Arab Republic's life expectancy at birth decreased by 0.4 years, mean years of schooling increased by 1.1 years and expected years of schooling decreased by 1.3 years. Syrian Arab Republic's GNI per capita decreased by about 28.9 percent between 1990 and 2015.

Table A: Syrian Arab Republic's HDI trends based on consistent time series data

	Life expectancy at birth	Expected years of schooling	Mean years of schooling	GNI per capita (2011 PPP\$)	HDI value
1990	70.1	10.3	4.0	3,431	0.556
1995	71.5	9.7	4.5	4,612	0.577
2000	72.7	10.1	4.6	4,680	0.589
2005	74.3	11.4	5.8	5,427	0.636
2010	72.0	12.0	6.3	6,174	0.646
2011	71.1	12.5	6.3	5,854	0.645
2012	70.4	13.0	6.3	4,668	0.635
2013	69.9	9.0	6.3	3,632	0.575
2014	69.6	9.0	5.6	2,905	0.553
2015	69.7	9.0	5.1	2,441	0.536

Figure 1 below shows the contribution of each component index to Syrian Arab Republic's HDI since 1990.

Figure 1: Trends in Syrian Arab Republic's HDI component indices 1990-2015

Assessing progress relative to other countries

The human development progress, as measured by the HDI, can usefully be compared to other countries. For instance, during the period between 1990 and 2015 Syrian Arab Republic, Egypt and Tunisia experienced different degrees of progress toward increasing their HDIs (see figure 2).

Figure 2: HDI trends for Syrian Arab Republic, Egypt and Tunisia, 1990-2015

Syrian Arab Republic's 2015 HDI of 0.536 is above the average of 0.497 for countries in the low human development group and below the average of 0.687 for countries in Arab States. From Arab States, countries which are close to Syrian Arab Republic in 2015 HDI rank and to some extent in population size are Egypt and Morocco, which have HDIs ranked 111 and 123 respectively (see table B).

Table B: Syrian Arab Republic's HDI and component indicators for 2015 relative to selected countries and groups

	HDI value	HDI rank	Life expectancy at birth	Expected years of schooling	Mean years of schooling	GNI per capita (PPP US\$)
Syrian Arab Republic	0.536	149	69.7	9.0	5.1	2,441
Egypt	0.691	111	71.3	13.1	7.1	10,064
Morocco	0.647	123	74.3	12.1	5.0	7,195
Arab States	0.687	—	70.8	11.7	6.8	14,958
Low HDI	0.497	—	59.3	9.3	4.6	2,649

Inequality-adjusted HDI (IHDI)

The HDI is an average measure of basic human development achievements in a country. Like all averages, the HDI masks inequality in the distribution of human development across the population at the country level. The 2010 HDR introduced the IHDI, which takes into account inequality in all three dimensions of the HDI by 'discounting' each dimension's average value according to its level of inequality. The IHDI is basically the HDI discounted for inequalities. The 'loss' in human development due to inequality is given by the difference between the HDI and the IHDI, and can be expressed as a percentage. As the inequality in a country increases, the loss in human development also increases. We also present the coefficient of human inequality as a direct measure of inequality which is an unweighted average of inequalities in three dimensions. The IHDI is calculated for 151 countries. For more details see [Technical note 2](#).

Syrian Arab Republic's HDI for 2015 is 0.536. However, when the value is discounted for inequality, the HDI falls to 0.419, a loss of 21.8 percent due to inequality in the distribution of the HDI dimension indices. Egypt

and Morocco show losses due to inequality of 29.0 percent and 29.5 percent respectively. The average loss due to inequality for low HDI countries is 32.3 percent and for Arab States it is 27.5 percent. The Human inequality coefficient for Syrian Arab Republic is equal to 21.4 percent.

Table C: Syrian Arab Republic's HDI for 2015 relative to selected countries and groups

	HDI value	Overall loss (%)	Human inequality coefficient (%)	Inequality in life expectancy at birth (%)	Inequality in education (%)	Inequality in income (%)
Syrian Arab Republic	0.419	21.8	21.4	14.5	31.5	18.3
Egypt	0.491	29.0	28.2	13.4	35.0	36.3
Morocco	0.456	29.5	28.3	16.0	45.8	23.0
Arab States	0.498	27.5	27.1	17.9	37.1	26.2
Low HDI	0.337	32.3	32.0	35.1	37.1	23.9

Gender Development Index (GDI)

In the 2014 HDR, HDRO introduced a new measure, the GDI, based on the sex-disaggregated Human Development Index, defined as a ratio of the female to the male HDI. The GDI reflects gender inequalities in achievement in the same three dimensions of the HDI: health (measured by female and male life expectancy at birth), education (measured by female and male expected years of schooling for children and mean years for adults aged 25 years and older); and command over economic resources (measured by female and male estimated GNI per capita). For details on how the index is constructed refer to [Technical note 3](#). Country groups are based on absolute deviation from gender parity in HDI. This means that the grouping takes into consideration inequality in favour of men or women equally.

The GDI is calculated for 160 countries in the 2015 HDR. The female HDI value for Syrian Arab Republic is 0.475 in contrast with 0.558 for males, resulting in a GDI value of 0.851, which places the country into Group 5. In comparison, GDI values for Egypt and Morocco are 0.884 and 0.826 respectively (see Table D).

Table D: Syrian Arab Republic's GDI for 2015 relative to selected countries and groups

	Life expectancy at birth		Expected years of schooling		Mean years of schooling		GNI per capita		HDI values		F-M ratio
	Female	Male	Female	Male	Female	Male	Female	Male	Female	Male	GDI value
Syrian Arab Republic	76.6	63.9	8.9	9.0	4.6	5.6	835	4,007	0.475	0.558	0.851
Egypt	73.6	69.2	13.0	13.2	6.4	7.9	4,750	15,267	0.640	0.724	0.884
Morocco	75.3	73.3	11.5	12.6	3.8	6.4	3,388	11,091	0.579	0.700	0.826
Arab States	72.8	69.1	11.4	12.1	5.9	7.6	5,455	23,810	0.621	0.726	0.856
Low HDI	60.7	58.0	8.5	10.0	3.6	5.6	1,950	3,365	0.455	0.536	0.849

Gender Inequality Index (GII)

The 2010 HDR introduced the GII, which reflects gender-based inequalities in three dimensions – reproductive health, empowerment, and economic activity. Reproductive health is measured by maternal mortality and adolescent birth rates; empowerment is measured by the share of parliamentary seats held by women and attainment in secondary and higher education by each gender; and economic activity is measured by the labour market participation rate for women and men. The GII can be interpreted as the loss in human development due to inequality between female and male achievements in the three GII dimensions. For more details on GII please see [Technical note 4](#).

Syrian Arab Republic has a GII value of 0.554, ranking it 133 out of 159 countries in the 2015 index. In Syrian Arab Republic, 12.4 percent of parliamentary seats are held by women, and 34.8 percent of adult women have reached at least a secondary level of education compared to 43.4 percent of their male

counterparts. For every 100,000 live births, 68 women die from pregnancy related causes; and the adolescent birth rate is 39.4 births per 1,000 women of ages 15-19. Female participation in the labour market is 12.2 percent compared to 70.8 for men.

In comparison, Egypt and Morocco are ranked at 135 and 113 respectively on this index.

Table E: Syrian Arab Republic's GII for 2015 relative to selected countries and groups

	GII value	GII Rank	Maternal mortality ratio	Adolescent birth rate	Female seats in parliament (%)	Population with at least some secondary education (%)		Labour force participation rate (%)	
						Female	Male	Female	Male
Syrian Arab Republic	0.554	133	68	39.4	12.4	34.8	43.4	12.2	70.8
Egypt	0.565	135	33	51.9	2.2	54.5	68.2	22.8	76.1
Morocco	0.494	113	121	31.7	15.7	25.7	33.2	25.3	74.3
Arab States	0.535	—	142	47.7	15.5	41.6	52.3	22.3	75.1
Low HDI	0.590	—	553	101.8	22.0	14.8	25.9	60.3	77.1

Maternal mortality ratio is expressed in number of deaths per 100,000 live births and adolescent birth rate is expressed in number of births per 1,000 women ages 15-19.

Multidimensional Poverty Index (MPI)

The 2010 HDR introduced the MPI, which identifies multiple overlapping deprivations suffered by households in 3 dimensions: education, health and living standards. The education and health dimensions are each based on two indicators, while standard of living is based on six indicators. All of the indicators needed to construct the MPI for a country are taken from the same household survey. The indicators are weighted to create a deprivation score, and the deprivation scores are computed for each household in the survey. A deprivation score of 33.3 percent (one-third of the weighted indicators) is used to distinguish between the poor and nonpoor. If the household deprivation score is 33.3 percent or greater, the household (and everyone in it) is classified as multidimensionally poor. Households with a deprivation score greater than or equal to 20 percent but less than 33.3 percent live *near multidimensional poverty*. Finally, households with a deprivation score greater than or equal to 50 percent live in severe multidimensional poverty. The MPI is calculated for 102 developing countries in the 2015 HDR. Definitions of deprivations in each dimension, as well as methodology of the MPI are given in [Technical note 5](#).

The most recent survey data that were publically available for Syrian Arab Republic's MPI estimation refer to 2009. In Syrian Arab Republic, 7.2 percent of the population (1,485 thousand people) are multidimensionally poor while an additional 7.4 percent live near multidimensional poverty (1,524 thousand people). The breadth of deprivation (intensity) in Syrian Arab Republic, which is the average deprivation score experienced by people in multidimensional poverty, is 39.1 percent. The MPI, which is the share of the population that is multi-dimensionally poor, adjusted by the intensity of the deprivations, is 0.028. Egypt and Morocco have MPIs of 0.016 and 0.069 respectively.

Table F shows the percentage of Syrian Arab Republic's population that lives near multidimensional poverty and that lives in severe multidimensional poverty. The contributions of deprivations in each dimension to overall poverty complete a comprehensive picture of people living in multidimensional poverty in Syrian Arab Republic. Figures for Egypt and Morocco are also shown in the table for comparison.

Table F: The most recent MPI for Syrian Arab Republic relative to selected countries

	Survey year	MPI value	Head-count (%)	Intensity of deprivations (%)	Population share (%)			Contribution to overall poverty of deprivations in (%)		
					Near poverty	In severe poverty	Below income poverty line	Health	Education	Living Standards
Syrian Arab Republic	2009	0.028	7.2	39.1	7.4	1.3		34.0	54.7	11.3
Egypt	2014	0.016	4.2	37.4	5.6	0.4		46.7	45.6	7.8
Morocco	2011	0.069	15.6	44.3	12.6	4.9	3.1	21.8	44.8	33.4

Dashboard on Life-course gender gap

Life-course gender gap dashboard contains a selection of 14 key indicators that display gender gaps over the life course – childhood and adolescence, adulthood and older age. The indicators refer to health, education, labour market and work, and social protection. Some indicators are presented only for women and some are given in the form of female-to-male ratio. Three-color coding is used to visualize partial grouping of countries by each indicator in this table. Countries are grouped partially by their performance in each indicator into three groups of approximately equal size (terciles), thus, there is the top third, the middle third and the bottom third. These three groups are colored. Sex ratio at birth is an exception - countries are grouped into two groups: the natural group with values between 1.04-1.07 (inclusively) and the gender-biased group if the value is outside the natural range. Countries with values of a female-to-male ratio concentrated around 1 form the group with the top performers in that indicator. Deviations from parity are treated equally irrespectively of which gender is overachieving. The coloring provides information about a country's performance relative to others. It can be seen as a simple visualization tool as it helps the users to immediately picture the country's performance. It also allows grouping countries by each indicator using a color scale. More details about partial grouping in this table are given in [Technical note 6](#).

Table G provides the number of indicators in which Syrian Arab Republic performs: better than at least two thirds of countries (i.e., it is among the top third performers), better than at least one third but worse than at least one third (i.e., it is among the medium third performers), and worse than at least two thirds of countries (i.e., it is among the bottom third performers). Figures for Egypt and Morocco are also shown in the table for comparison.

Table G: Summary of Syrian Arab Republic's performance in the Life-course gender gap dashboard relative to selected countries

	Childhood and youth (6 indicators)			Adulthood (6 indicators)			Older age (2 indicators)			Overall (14 indicators)			Missing indicators
	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	
	Number of indicators												
Syrian Arab Republic	1	1	4	0	1	5	0	1	0	1	3	9	1
Egypt	2	2	2	0	1	5	0	0	2	2	3	9	0
Morocco	3	2	1	1	2	3	0	1	0	4	5	4	1

Dashboard on Sustainable development

Sustainable development dashboard contains a selection of 15 key indicators that cover environmental, economic and social sustainable development. Environmental sustainability indicators represent a mix of level and change indicators related to renewable energy consumption, carbon-dioxide emissions, change in forest area and fresh water withdrawals. Forest area as percentage of the total land area is given in the table but is not used for comparison, instead, the total change in forest area between 1990 and 2015 is used. Economic sustainability indicators look at adjusted net savings, external debt stock, natural resources depletion, diversity of economy and government's spending on research and development. Social sustainability is captured by changes in income and gender inequality, multidimensional poverty and the projected old age dependency ratio. Three-color coding is used to visualize partial grouping of countries by each indicator in this table. Countries are grouped by each indicator into three groups of approximately equal sizes (terciles), thus there is the best third, the middle third and the bottom third. The intention is not to suggest the thresholds or target values for these indicators but to allow a crude assessment of country's performance relative to others. More details about partial grouping in this table are given in [Technical note 7](#).

Table H provides the number of indicators in which Syrian Arab Republic performs: better than at least two thirds of countries (i.e., it is among the top third performers), better than at least one third but worse than at least one third (i.e., it is among the medium third performers), and worse than at least two thirds of countries (i.e., it is among the bottom third performers). Figures for Egypt and Morocco are also shown in the table for comparison.

Table H: Summary of Syrian Arab Republic's performance in the Sustainable development dashboard relative to selected countries

	Environmental sustainability (5 indicators)			Economic sustainability (5 indicators)			Social sustainability (4 indicators)			Overall (14 indicators)			Missing indicators
	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	Top third	Middle third	Bottom third	
	Number of indicators												
Syrian Arab Republic	2	1	2	2	1	0	1	0	2	5	2	4	3
Egypt	1	1	3	2	1	2	1	1	0	4	3	5	2
Morocco	1	1	3	3	2	0	0	3	0	4	6	3	1
