

Figure 1. The global burden of disease: COVID-19 versus other causes

Figure 2. Human development: From basic to enhanced capabilities

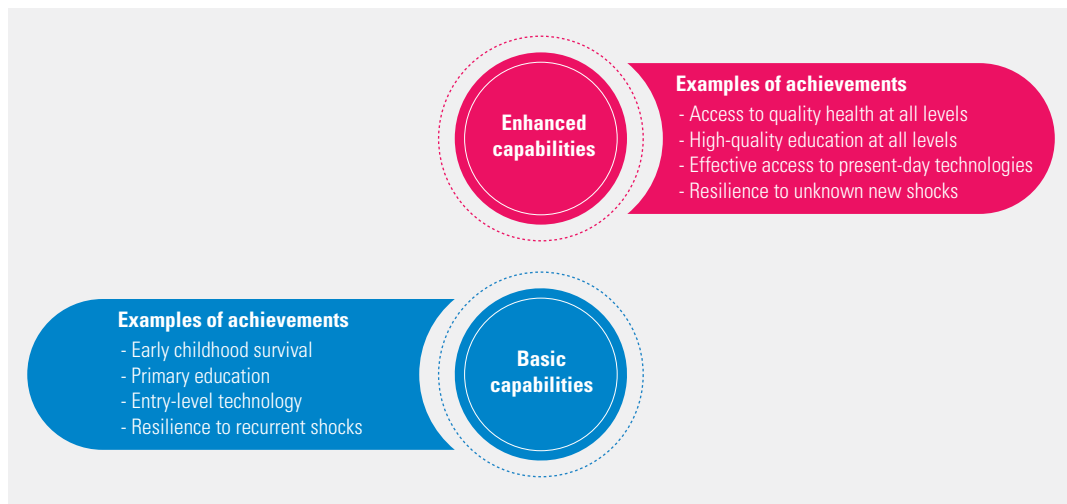

Figure 3. Human development is facing an unprecedented hit since the concept was introduced in 1990

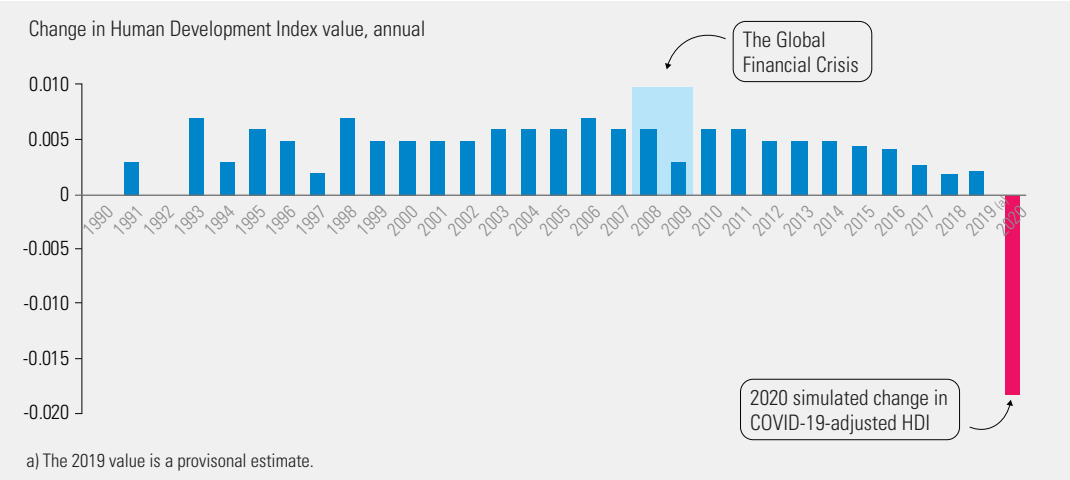

Figure 4. The decline in human development due to COVID-19 could be halved with more equitable internet access

Figure 5. Most countries around the globe have implemented nonpharmaceutical interventions to slow the spread of COVID-19

Figure 6. Internal and external restrictions related to COVID-19 affected more than 7 billion people in 183 countries by mid-April 2020

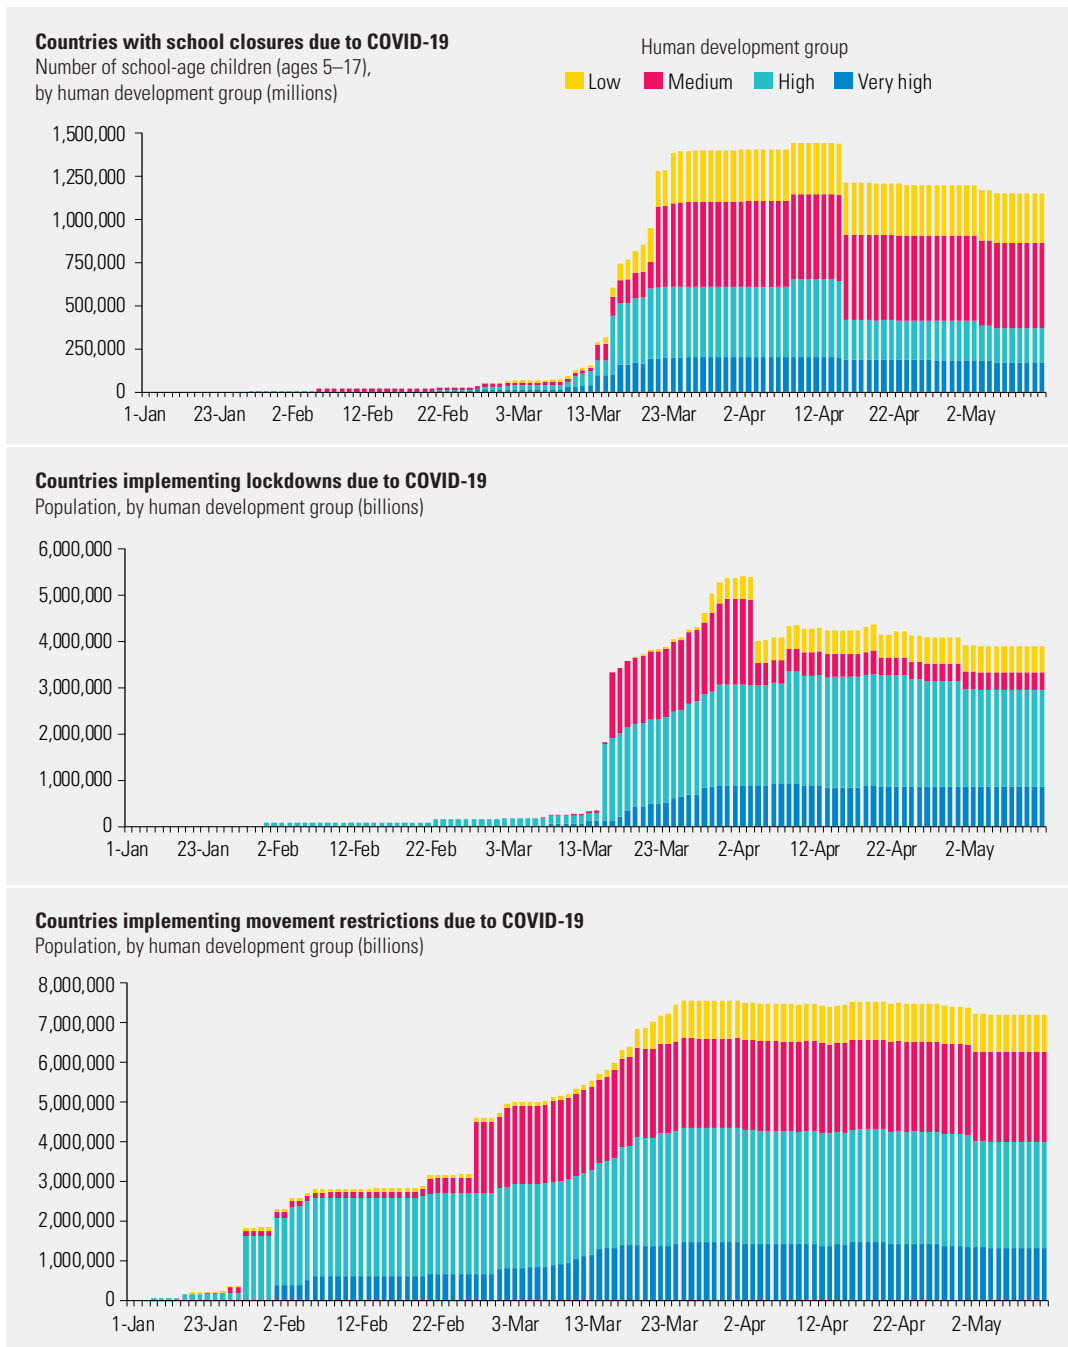

Figure 7. The scale of fiscal measures related to COVID-19 depends on a country's level of human development

Figure 8. Global youth unemployment jumped after the 2008 global financial crisis and has yet to recover

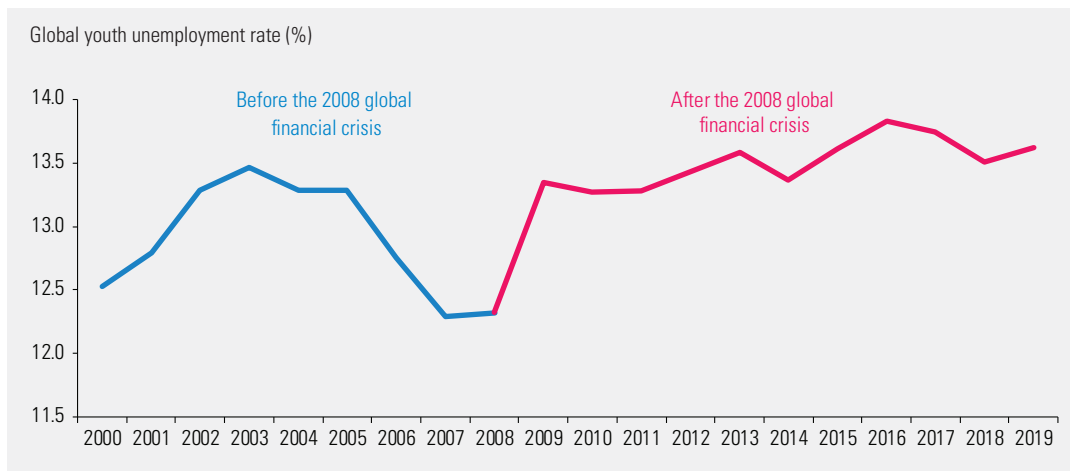

Figure 9. The lowest socioeconomic group in Puerto Rico saw estimated excess deaths related to Hurricane Maria peak two months later than the medium and highest socioeconomic groups did

Box figure 1. The short-term effective out-of-school rate for primary education has jumped substantially for all human development groups

Short-term effective out-of-school rate for primary education,
second quarter of 2020 (% of primary school-age children)

Box figure 2. Inequality in internet access will have a major effect on the long-term out-of-school rate for primary education

Figure 10. Inequalities in access to technology across human development groups are wide and growing

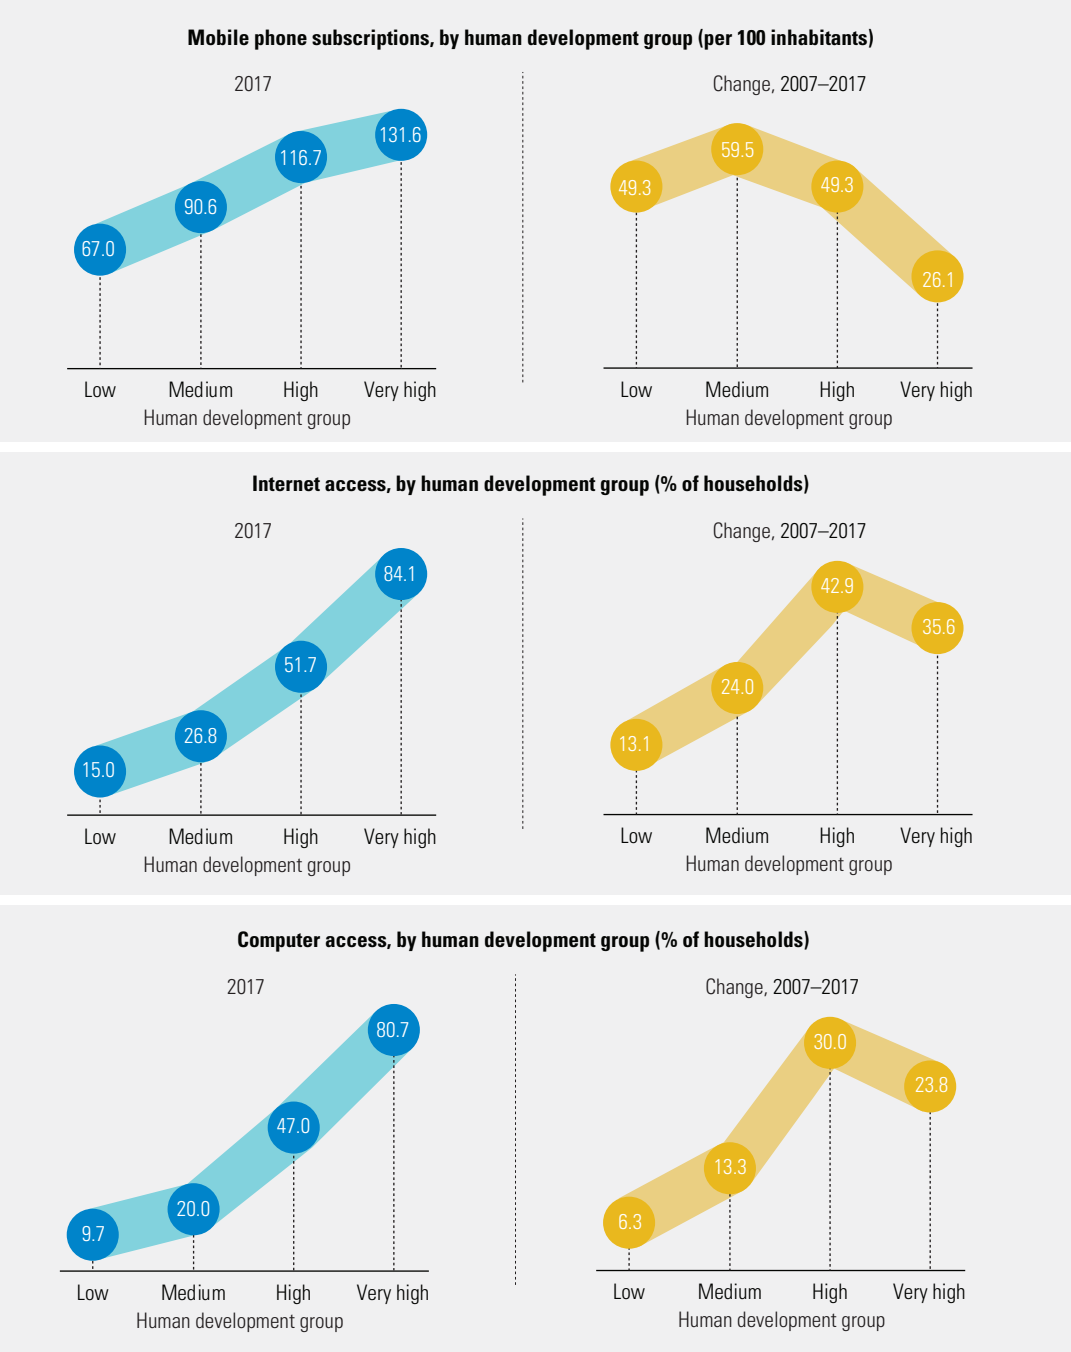

Figure 11. Very few countries—even those with higher human development—are using widespread testing

Figure 12. Inequalities in knowledge and innovation are intense and widening in all human development groups

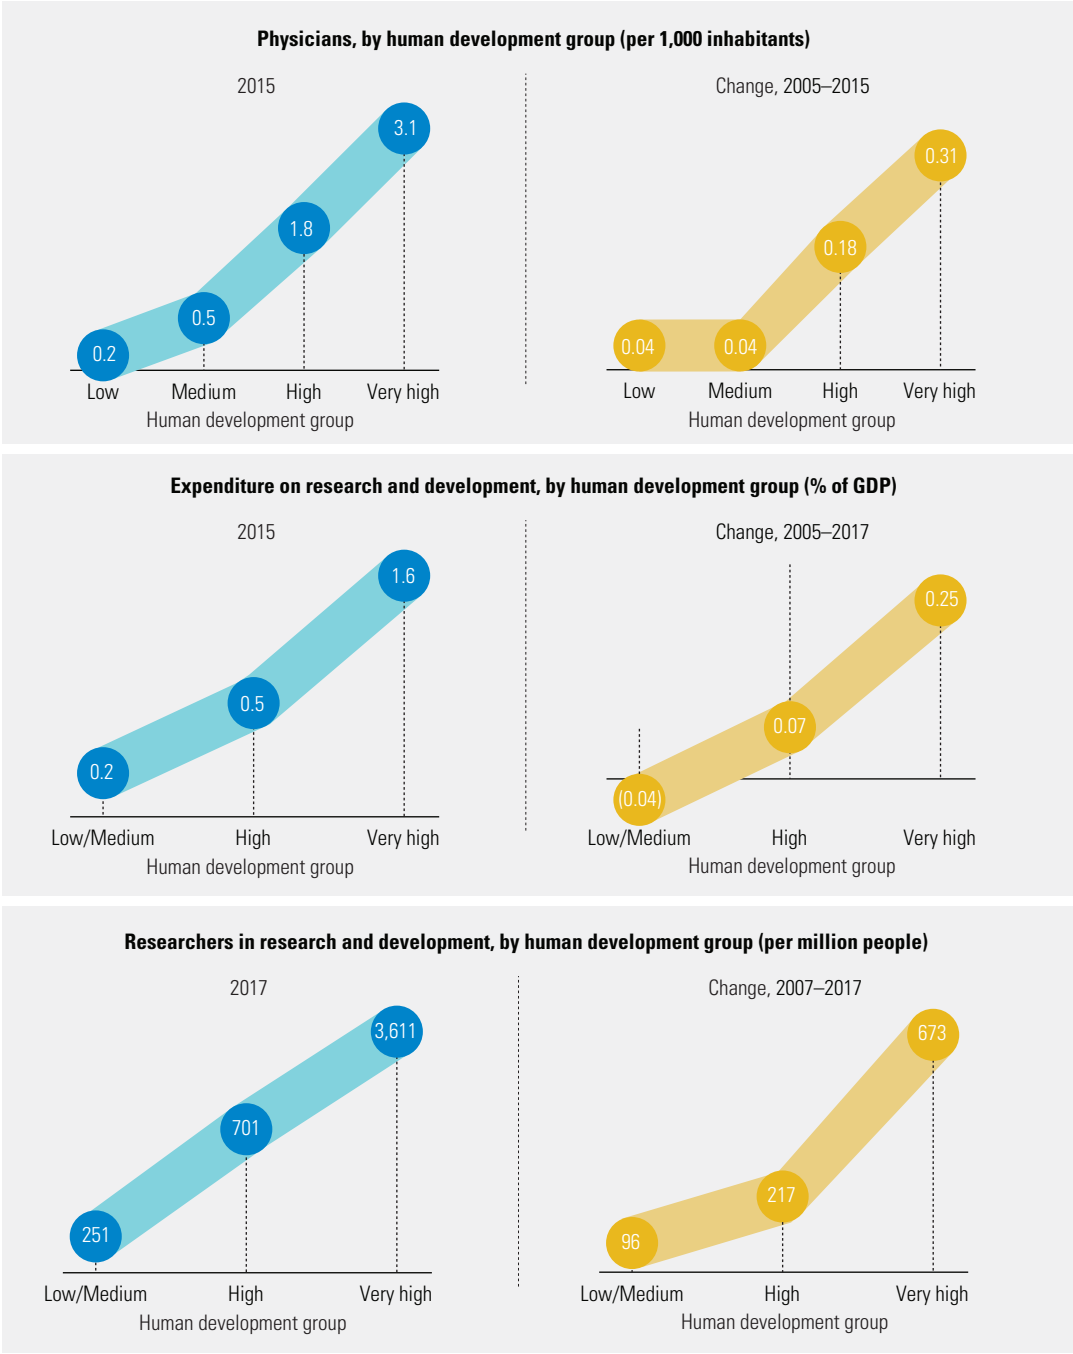

Figure 13. People in low-income groups are much more vulnerable during the COVID-19 crisis because they lack the ability to come up emergency funds

Figure 14. High global compliance with social distance behaviours
