Victoria Láinez Alvarado	Municipal Program for Childhood and Youth COMVIDA, Nacaome
Xavier Medina Maradiaga	Youth Pastoral in Choluteca

This National Human Development Report (NHDR) 2008/2009 is dedicated to youth, which occupies a prominent position in the Agenda of the United Nations System (UN), especially since 1985, declared by the General Assembly as the International Year of Youth.

The report consists of analysis and reflections on the varied forms of social exclusion that Honduran youth is facing, and to suggest policies, programs and projects for social inclusion, youth citizenship building, and human development. It advocates the struggle against the main forms of social exclusion that limit the real exercise potential of youth and promotes its participation in the design, execution and follow-up of programs and projects geared toward making it a strategic protagonist of development.

The participation of youth in building a more inclusive, just and solidary Honduras is primordial and fundamental because, as Mr. Ban Ki-moon, General Secretary of the United Nations, pointed out: “when youth has the opportunity to participate in their communities it has more possibilities of incorporating successfully into the adult life. Those that are marginalized and lack those opportunities often feel alienated and hopeless and adopt anti-social and high-risk behaviors. When youth has participated more fully in its communities and the countries have taken advantage of the youth labor supply, youth has been a powerful and positive force that has driven the development of societies” (Report of the Secretary General, 30 October, 2008).

Adopting a sustainable human development paradigm also implies the improvement of human capabilities and the creation of opportunities so that the population can exercise them. In this regard, it is essential for the Honduran youth to occupy a preferential place in the public agenda that allows it to participate as a main protagonist in

the development process of the Honduran society. The inherent familiarity of youth with modern information and communication technologies; its vitality; and enthusiasm in whatever it does, as well as the dreams and hopes for a promising future will be an enormous contribution to this purpose. Therefore, the commitment of the State, organized civil society, private sector, and parents is to create the conditions for youth to contribute to the human development of the Honduran society to the best of their capacity. Spaces and minds must be open to realize that the youth of today are part of the solution, and not an obstacle, to the problems and challenges of human development. We must open our understanding of the cultural changes of this era of globalization; changes that generate huge avenues to achieve the potentials, capacities and opportunities for the youth of our time, a youth obviously different than the one we, as adults of today, lived in our time since societies change continually and each generation faces new challenges and agendas.

This report is not limited to the diagnostic analysis of the situation of the Honduran youth. It also offers policy guidelines and proposals that we hope will contribute to addressing from a multidimensional focus the problems and challenges faced by the Honduran youth in becoming strategic agents for the human development of Honduras. We trust that this report will develop into an important point of reference and a valuable tool for youth, whose voices are reflected herein; for the parents; for the educators; for the private sector; for the international aid agencies; for related NGOs working with youth; and for the Honduran State who is called upon to coordinate the great national effort in which all citizens should become involved in order to give this generation of youth, and the one that will follow, a central position granted to them by

the information and knowledge society, and the economic, political and cultural globalization. This is one of the biggest challenges we face and to which we must all contribute with the best of our intelligence, talents, initiatives, commitment and solidarity, and from our own particular niche in the Honduran society,

This report is the outcome of a rigorous research process that used a wide range of methodological tools. Among these is the National Survey of Human Development Perception (ENPDH, Spanish acronym), the first of its kind, carried out by the UNDP with the main support of the Swedish International Development Cooperation Agency and placed at the disposition of all sectors of the Honduran society. 4,223 young Hondurans participated in the survey which was prepared by the National Institute of Statistics (INE, Spanish acronym). Fifty Focus Groups were formed with young Hondurans and adults from different parts of the country, a multitude of interviews were held with different sectors of the Honduran society, and life stories were gathered with young Hondurans. Likewise, feedback was provided from a National Youth Council, a National Advisory Council, six Regional Advisory Councils, and an Inter-agency Technical Committee from the UNS, among other advisory and feedback spaces.

The intention of the 2008/2009 NHDR is to contribute to the development of the National Youth Policy which is an extremely relevant tool to propel programs and projects for young Hondurans, based on the concept of youth citizenship building. In my condition as UNDP Resident Representative, I want to express my gratitude to all the persons who in one way or another were involved in making this report a reality. We express our acknowledgement and gratitude to the Swedish International Development Cooperation Agency (SIDA), who has been a decisive support in this effort, as well as the Spanish Agency for International Development Cooperation (AECID, Spanish acronym). Our deepest gratitude goes to all of the Honduran youth, who has been the main protagonist throughout this entire process.

Tegucigalpa, June. 2009

Rebeca Arias
Resident Representative
United Nations Development
Program, Honduras

Acknowledgement

The National Human Development Report 2008/2009 is the outcome of a highly participatory process, with the generous collaboration and participation of numerous persons, institutions and organizations whose valuable input contributed to the realization of this report.

The UNDP Honduras Human Development Team expresses its gratitude and recognition to the following men and women:

To the members of the national and regional Youth Councils for showing us the varied facets of the current reality of young Hondurans and giving us their comments throughout the different stages of preparation of this report; our gratitude to Ada Luz López, Adrian Vásquez, Alberto Fuentes, Alejandro Ortega, Alex Gardner, Alfonso Martínez, Alfredo Sánchez, Alicia Anabel Cruz, Alma Ivón Mendoza, Ana Chavarría, Ana J. Chavarría, Ana Fabiola Castillo B., Ana María Flores Hernández, Ana María Maradiaga, Ana Mireya Torres, Ana Sofía Velásquez, Andrea E. Estrada, Andrea Nicolle Benavides, Andrea S. Diaz Motz, Roberta Ordóñez, Rosy Sevilla, Suelen Kensil Funez, Yorleni Sarahí Ruiz and Wendy Waleska Borjas Chavez.

To the facilitators of the regional workshops for their important contribution. Thank you to Wendy Medina (Facilitator of the Central-Western region); Yasmina Fuentes (Facilitator of the Southern region); Nora Recinos (Facilitator of the Western region); Nadina López (Facilitator of the Northern region); Leslie Franco (Facilitator of the Atlantic region).

To the 500 Honduran men and women – most of them young – who participated in the different Focus Groups and with the richness of their discussions and feelings expressed in the work meetings helped us to understand many of the attitudes and perception of the Honduran youth. Our most sincere gratitude to each and every one of the participants that attended the meetings held in: Tegucigalpa (Francisco Morazán), San Pedro Sula (Cortés), Comayagua (Comayagua), Santa Bárbara (Santa Bárbara), Gracias (Lempira), La Esperanza (Intibucá), Santa Rosa de Copán (Copán), Catacamas (Olancho), Siguatepeque (Comayagua), La Ceiba (Atlántida) and Tela (Atlántida).

We are thankful to the firm ANED Consultores for performing the work to structure and arrange the logistics of the fifty Focus Groups, especially to Siomara Bertrand, Karina Osorto and Maria Amador.

A very special gratitude to the National Youth Institute (INJ, Spanish acronym), to the leadership of the Minister Gustavo Cáceres and his technical team, especially Norma Carías, Randolpho García, Romulo Alvarado, Sonia Velásquez, Ana Hall and Bayardo Sánchez, for their firm support to the NHDR process. Likewise to the Secretariat of Labor and Social Security, particularly to Patricia Canales, Director of Employment, to Allan Cruz, Director of the UPEG and also to Roman Pacheco, Cynthia Membreño, Gerson Gonzáles, Rina Suárez Burgos, technicians from the Honduran Labor Market Observatory. To the Secretariat of Industry and Trade, specifically Ana Murillo, Vice minister for the MIPYMES (Micro, Small

and Medium Enterprises). To the Secretariat of the Interior and Governance, the Secretariat of Foreign Affairs, Secretariat of Agriculture and Livestock, particularly to the Minister Héctor Hernández Amador, Jorge Navarro (SEFIN), Alba Cecilia Mena (IHNFA), Edgardo Arita (IHNFA), Belinda Ponce (Secretariat of Education), Omar Rivera (Social Cabinet).

Our appreciation to the different Government Institutions that in one way or another have kindly collaborated in preparing this report.

Our gratitude to the municipalities of Santa Rosa de Copán, Siguatepeque, Danlí, and San Pedro Sula.

To the National Institute of Statistics (INE) for their valuable collaboration with the National Survey of Human Development Perception (ENPDH, Spanish acronym), performing the work in the design of the sample, test piloting the survey form, training the surveyors, taking the survey at field level, and coding and entering the data. We want to thank the support of its Director, Sergio Sánchez as well as Gloria Velásquez, Horacio Lovo, Suyapa Ponce, Wilmer Banegas and all of the technical and support staff that in one way or another participated in this process.

To the members of the Inter-agency Technical Committee of the UNS and the different UNDP Units that provided their comments and input for the survey; and the work performed by Maylee Galvez, Eduardo Portillo and Rafael Galvez who collaborated with the data processing and tabulation and Héctor Varela that worked on diagramming the survey results for the document.

To Susana Li and Erasmo Enríquez from the Supreme Electoral Court, to Norma Guillen from the Secretariat of Education; to the staff from the Planning and Management Assessment Unit (UPEG, Spanish acronym) of the Secretariats of Public Education, Public Health, Finances and International Technical Cooperation, all of whom provided information and statistical data.

We also want to thank Hedman Allan Paredes, Guadalupe Sánchez and Allan Díaz from AMHON, Esteban Hernández (COHEP), Denisse Miranda (FOPRIDEH), Ligris Cáceres (FONAC), Adalid Irías (CONPAH) and Dante Mossi from the World Bank for their support in obtaining information and statistical data.

To the Center for the Migrant Returnee (CAM-R, Spanish acronym), particularly Sister Valdetta Willeman, Head of the CAM-R, for allowing to survey the returnees on issues regarding migration and citizenship and also providing information on

the Center's activities, application of the migratory policy, situation of the returnee migrant and on the National Fund for the Honduran Migrant (FON-AMIH). We also want to thank all the CAM-R personnel, among them Aracely Romero Mendoza, Jose Virgilio Galo, Ernesto Galdámez Carías, María Brígida Abelar, Wendy Gissel Gonzáles, Nohemy Cruz Palma, Lourdes Pamela Solórzano, Luis Fernando Moya, Oscar Maldonado, Mirian Aracely Flores y Rosa Haydee López.

To the local consultants that offered important reflections and studies that helped us put together the 2008/2009 NHDR. Our thanks to Rolando Morales for his counseling on the methodology to calculate the human development indexes and to Marlon Carranza for his input on youth in social risk, along with Elena Carolina Banegas López for the orthographic and grammatical edition of the report.

To the readers and commentators of the different 2008/2009 NHDR sections. Our appreciation to Julieta Castellanos (Rector of the UNAH), Vilma Morales (former President of the Supreme Court of Justice), Manuel Gamero (Executive Director of *Diario Tiempo*), Hernando Clavijo (UNFPA Resident Representative in Honduras), Pablo Salazar (UNDP consultant), Luca Renda (UNDP Deputy Resident Representative) and Rebeca Arias (UNDP Resident Representative).

Our appreciation to the different academic institutions that gave us their support; to the Research Institute of Economic Sciences - UNAH, for letting us access the data base and research documents on labor issues. Our gratitude as well to Renan Rápalo from the Pedagogic University for the cultural Exchange and sharing ideas; to Miguel Ángel Fúnez, Rita Tamashiro and el Dr. Armando Euceda from the National Autonomous University of Honduras for his useful input and pertinent information.

Thanks to GTZ, particularly Abraham Ramírez, for the rich discussions on the issue of employment, productivity, competitiveness and rural development. Thanks to the Chamber of Commerce and Industry of Tegucigalpa, especially Cándido Amaya for providing information on the E-employment Exchange in addition to the Honduran Council of Private Enterprise, specifically Benjamin Bográn.

Our gratitude to the CADERH for supplying data on projects for micro Enterprise formation, to FINCA Honduras Finance Institution represented by José Luis Flores, Operations Manager, for sharing on the concept and syllabus on employment,

and to Edith Zavala from FONAMIH.

For their contribution to defining the concept of audiovisual tools that accompany the NHDR, our thanks to: Servio Tulio Mateo, Gabriela Lucia Urbina, Rina E. Triminio, José Luis Reyes, Elizabeth Figueira, Nolban Medrano, Adrian Guerra, Gerardo Aguilar, Ángel Maldonado, Marvin Orillan, Juan Fernando Lobo, Marco Orellana, Mario Erazo, Fabricio R. Servellón and Susana Lobo.

For preparing the promotion capsules and video documentary, our gratitude to: Ángel David Maldonado Rosales, Cesar Hernández, Alishan Mayorca, Elbert Mazamora, Javier Narrayega, José Antonio López, Laura Bermúdez, Claudia Barrientos, Andrés Papousek and the other collaborators from Nemesis Estudio.

For preparing the musical video and song for the 2008/2009 NHDR, our recognition to: Mario Erazo, Juan José Núñez, Sherry and Sheila, the Bohemios del Reguetón, Fabricio Servellón, Nilo Espinal, Juan José Núñez and their collaborators.

The publicity animation was possible thanks to the work of Nolban Martin Medrano, Adrian Guerra and their collaborators in Latino Estudio.

A special thank you to the work carried out by our colleagues in the United Nations System (UNS).

Thanks to the UNS Technical Committee on the 2008/2009 NHDR: Willmer Turcios (WFP); Vanessa Baldassarre (FAO); María Elena Ordóñez (Inter-agency Program for Adolescents and Youth, UNFPA, UNICEF and PAHO); Hernando Clavijo and Jozef Maerien (UNFPA), Jessica Janson (UNV) and Héctor Espinal (UNICEF) for a job well done.

To the colleagues Daniel Kostzer from the UNDP Argentina, our gratitude for the advice on calculating the combined indexes and to Paulina Franceschi from UNDP Panamá for sharing the inputs. Thank you to ILO Honduras, specifically Fernando Garcia Granara and Gina Zablah that supplied data from labor projects in Central America; to Braulio Serna, Head of the ECLAC Mexico Agricultural Unit for his comments in the concept stage on agricultural employment. We also wish to thank Amye Gaye and Alison Kennedy from the Office of the UNDP Human Development Report for counseling on calculating the human development indexes

Thanks to Mirna Rodríguez and Jeremy Mac Gillivray from the IMO Honduras for providing information and ideas on the topic of migration and to Jorge Ramos and Yuri Leiva from the UNS

Honduras Coordination Unit; to Silvia Felipe and Rosibel Gomez of UNIFEM and Wendy Aguilar from UNV, for their comments and valuable contribution. We also thank César Castillo from the WFP for his contribution and to all the colleagues in all the UNDP Units in the Honduras Office.

Our gratefulness to Flor María Matute (UNFPA), Mariko Kagoshima (UNICEF), Fabiola Aguilar (UNICEF), Jennie Gabrie (UNICEF), Indira Fox (UNICEF), Karla Zepeda (PAHO/WHO), Marcela Cerritos (UNICEF), Marcos Carías (UNFPA), Michela Polesana (UNAIDS), Orestes Cabrera (PAHO/WHO) for facilitating the information on violence, HIV & AIDS and teen pregnancies in Honduras and Luisa Plata (UNFPA) and Mildred Tejada (UNFPA) for their support in the process to prepare the audiovisual tools.

Our special gratitude to the colleagues in the Prospective and Strategy Unit (UPE, Spanish acronym), Alejandra Valeriano, Arleng Enamorado, Gina Zablah, Issa Kirkconnell, Lesly Estrada, Maria Teresa Lambur, Vanessa Sansotta, Damaris Zelaya, Allan Castro, Domenico Tenaglia, Gianluca Giuman and Ivan Borja who collaborated in the different stages of preparing the Report, with a large number of contributions and without whom the research and workshops for the various councils would not have been possible.

To all the citizens who accepted to collaborate

anonymously in the different stages of the report, offering us their perception, opinions and other types of information that constituted an important input for the plural vision that the 2008/2009 NHDR wanted to draw together.

A special acknowledgement to the Swedish International Development Cooperation Agency (SIDA), especially to the Swedish Ambassador, Ewa Werner Dahlin, Ann Stodberg, Mía Rimby and Nilla Ingstorp. Thank you very much.

To the Spanish Agency for International Development Cooperation (AECID, Spanish acronym), our gratitude and to the Ambassadors Agustín Núñez and the Ambassador Ignacio Rupérez Rubio and to José Dallo.

To the Secretariat of International Technical Cooperation (SETCO), our gratitude for their support.

And finally, our deepest appreciation to Rebeca Arias, UNDP Honduras Resident Representative and Luca Renda, Deputy Resident Representative for the constant and valuable support throughout the entire process of preparing the 2008/2009 NHDR.

OVERVIEW

From social exclusion to a youth citizenship

I. A conceptual approach to the trinomial: social exclusion, youth citizenship building, and human development

This report intends to place the issue of youth in a prominent position on the public agenda, and does not only intend to be a mere assessment of the knowledge of youth, of their problems, their dreams and aspirations. It also offers a set of guidelines for policies, programs and projects to promote social inclusion, citizenship building and human development. Moreover, it aspires to become a basic instrument for designing public policies and executing socially agreed actions that contribute to strengthening the capabilities, opportunities and rights of the Honduran youth.

There is an explicit continuity between the 2008/2009 NHDR and the 2006 NHDR which was dedicated to citizenship and the conditions for its expansion. The latter used the whole of Honduran society as the unit of analysis while the first one focuses on the Honduran youth. Several of the issues intertwine since they are dimensions of the same problematic. And this happens not only under the objective conditions of citizenship building or expansion but also in the subjective aspects that emerge from the perceptions of the social subjects. The 2008/2009 NHDR is also on the same debatable line as the Project for the Development of Democracy in Latin America, PRODDAL, (UNDP, 2004) geared toward building “a democracy of men and women citizens”.

The 2008/2009 NHDR has adopted the focus of *social exclusion, youth citizenship and human development* as the theoretic perspective to endeavor in the analysis and interpretation of the current situation and the perspectives of Honduran youth. Social exclusion is understood as the deprivation

of capabilities and opportunities in the economic, social and political life of the country that Honduran youths are facing and that keeps them from accessing a full citizenship. In this context, social exclusion implies the denial of economic, social and political rights, civic and ethical responsibilities and the sense of belonging, which are innate to the condition of citizenship.

The spheres of social exclusion stressed in this report are: i) education; ii) employment; iii) citizen participation, and, iv) youth in social risk due to an environment of social marginalization and stigma and the lack of access to education and quality employment, in addition to a deficient citizen participation. The international migration of young Hondurans, one of the priority issues on the national agenda, is dealt with from the perspective of the lack of employment opportunities and of insertion into the world of employment.

Education is a fundamental tool to break the vicious circle of social exclusion and to encourage the achievement of higher levels of human development. Employment is core to overcoming the social exclusion and promoting the social inclusion of youth. Employment is not only a privileged source of income; it is also the source of social recognition; it is a door to enter into the condition of citizenship and obtain a project of autonomous life, as well as a necessary tool to build the family and a social respectability. The lack of decent employment and existing employment precariousness, the pursuit of better life opportunities and the possibility of sending remittances to the family are the key factors in understanding the magnetism of international migration for young men and women.

In the new context of crisis in the traditional socialization models and in the individualization process, the border lines that neatly separate the political from the social are diluted into a new

situation in which traditional political institutions are no longer the points of reference for establishing the meaning of youth actions. This report has chosen to make use of the citizen participation concept from the double perspective of: i) the voluntary and conscientious engagement of young Hondurans in organizations of any nature to take part in affairs of public interest, and, ii) the action promoted from within the State to involve the citizens in the decision making on issues that are of collective interest.

The social risk approaches have leaned toward privileging the individual and family sphere, frequently ignoring the communitarian and societal levels. The link between the notions of risk and social exclusion widens the scope for conceptualizing the social risks for young Hondurans, pointing the attention on obstacles that inhibit their effective participation in the economic, social, political and cultural life of society. This linkage allows mainstreaming the dynamics of the interrelation between the individual and society since it is vital for having a broader perspective of the phenomena of youth in social risk.

There are a large number of young Hondurans that can be considered in social risk and in a state of severe exclusion, yet this Report will focus on youth that has experienced early pregnancy, are infected by HIV and AIDS, and those who act as recipients and generators of social violence. The social exclusion to which these young Hondurans are subjected inhibits the development of capabilities for social inclusion, citizenship building, human development and exercise agency.

The road that leads from *social exclusion* to the social inclusion of young Hondurans has to cross through *citizenship building*. Social inclusion is understood as the process through which individuals, social groups or collectives are included in the society in which they live, ranging from the integration into the goods and services of an honorable life, as well as from the logic of integration into the responsibilities of citizenship and the right to a social identity.

In order to keep the social inclusion of young Hondurans from being passive, it must be carried out via building a notion of citizenship that incorporates a modern vision of citizenship as a set of civic rights and responsibilities. Building young people's citizenship is a process, through which youth develop certain citizenship competencies or capabilities, develops its identity, builds its public interest, creates its public sphere, and strengthens the practice of participation.

Social inclusion through citizenship building is fully congruent and in sync with the aspirations of the *human development* paradigm. Human development promotes the formation of capabilities and opportunities so that people can decide for the life style that they have reason to value. Human development calls for the elimination of all sources of deprivation that constrain the participation of individuals in the social, political and economic life of the community. Some of these sources, among others, are poverty, unemployment, shortage of economic opportunities, systematic social deprivations, and the negligent state of public services, intolerance and the excessive intervention of repressive States. These sources of deprivation of freedom leave the individual with few options and opportunities to exercise agency, that is, their capacity to act and promote their wellbeing and that of their community in terms of what they value or have reason to value. Persons with the capacity to practice their self-care are involved in actions that are congruent with these values.

The Honduran youth embody the present and future of the country and, given their potential for change, they are called upon to become strategic actors of development. Within the knowledge society which is in process of being socially built, and in the framework of the challenges of a globalized world, young Hondurans should be the torchbearers of the change and modernization of Honduras. The youth of our time is better prepared than the adult generation to assume the changes the country must make to achieve substantial progress in human development within an information society and the successful insertion into globalization. At this moment in time, investing in youth is one of the great challenges that the Honduran society is facing.

The concept of youths has been the object of great controversy, making it necessary to explore the conceptual debate on youth and its connections with the concepts of social exclusion, social inclusion, citizenship, human development and agency capacity. There are several approaches to the concept of youths: youth as part of the vital cycle, youth as a matter of age, and youth as a social and cultural construction.

For the purpose of the NHDR 2008/2009, the approach to the concept of youth stresses the perspective of a social and cultural construction. This approach highlights the heterogeneity and diversity of young people's cultural experiences and, in this regard, it has been pointed out that young people from higher income families, from

low income neighborhoods, from the rural area, and of ethnic groups and young women do not live their youth equally. Therefore, some authors prefer to speak of a variety of youth experiences in order to gather this diversity of young people's social and cultural experiences.

This perspective propounds the understanding of youth through notions such as social moratorium, vital moratorium and the generational issue.

In this context, social moratorium means a stage of life dedicated to building and preparing for the adult life that is accessed in a differential manner according to the social origin of the families of young people.

From the logic of the vital moratorium, youth is thought of as a stage in life in which there is an excess of vital energy that creates a sense of invulnerability that is characteristic of young men and women.

The generational concept refers to the stage in which each person socializes. Each generation incorporates into its cultural capital, new codes, skills, languages and ways of perceiving, appreciating, distinguishing and classifying the world around it, reasons for which we should not judge a generation of youth with the parameters of a past generation. Each time has its political, social and cultural characteristics that stamps its own imprint in each generation and youth is not always the same throughout time.

The youth of today is surrounded by great changes not only in the technological arena but also in the setting of social relationships.

Notable changes are happening in the field of socialization. In an era characterized by the economic and cultural globalization, the impact of new information and communications technologies, and the political identity crisis, the traditional spaces for socialization have been losing their footing and new socialization agents have been gaining ground. The family and school have been losing the socialization influence of the past and its place is now being disputed by the peer group, the media and the new information and communications technologies. In the international bibliography, these changes are debated by placing the concept of individualization in a core position.

It is argued that the individualization has restructured and weakened key institutions in the structures of classic industrialized societies such as work, family and the social class, which are based on traditional structures of gender, hierarchy and loyalty. Important changes have also

happened in the political world. It is argued that "we are living in an era in which the social order of the national State, the class, the ethnicity and the traditional family are in decline. The ethics of personal fulfillment is the most powerful current of modern society. The human being that chooses, that decides and shapes, that aspires to be the author of his own life and the creator of an individual identity has become the protagonist of our time. He or she is the fundamental cause of the changes that take place in the family and of the global gender revolution in relation to work and politics" (Beck & Gernsheim, 2003, p.70).

The concept of individualization offers important clues for understanding and interpreting the new socio-cultural scenarios in which the youth unfold within the highly industrialized countries, but also in countries similar to ours, characterized by massive poverty and social inequality. We are witnessing in many countries crisis of models in areas like schools, the workplace and the traditional forms of citizen participation which are the fundamental cores of the social exclusion process experienced by youth. In the respective surrounding, many of these processes are perceived as a lack of respect for authority and as a crisis of moral values that ruled in the past. In spite of these changes in the areas of culture and social relations, in poor and socially unequal surroundings as in a country like Honduras, the structural conditions continue to be an important obstacle to overcome in order to achieve the development of potentials and opportunities that are demanded by youth. This is the reason why the axis of exclusion-youth citizenship and human development constitutes the adequate focus to analyze and interpret the problems and challenges facing youth today in Honduras.

When speaking of social exclusion, reference is made to those individuals and groups or social collectives that do not have access to a set of economic, social, political and cultural opportunities that further a sense of belonging to a political community and to the civic duties and responsibilities that are inherent to it. Put in a nutshell, social exclusion implies the negation of the rights and obligations that full citizenship entails. Amartya Sen argues that "Being excluded from the facilities and benefits that are common to others is certainly a significant disadvantage that impoverishes the life that individuals can enjoy" (Sen, 2000, b, p. 44).

The process of social inclusion, youth citizenship and human development requires public

policies incorporating youth and originating from youth. Policies which include young people are essentially participatory and based on solidarity; not imposed from above. They are respectful and inclusive. Policies originating from youth are conceived, designed and carried out by young people by their own accord.

II. Main Findings of the Report

1. This report has confirmed that education in Honduras is a core element for youth citizenship building. The youth of today has more education than previous generations. However, in 2008, still 7.2% of Honduran youth were illiterate. Secondary education at the diversified level, which should be the minimum threshold, is only possible for 25.7% of youth. 25.4% of young Hondurans do not work or study and face few possibilities of incorporating into flexible vocational training programs. The report recognizes that education is fundamental for overcoming exclusion, if relevant to the requirement of the labor market. It also stresses that a democratic society requires diligent and convinced citizens, capable of fulfilling their duties and exercising their rights. In this task, education is called upon to play a predominant, irreplaceable and immediate role, with a paradigm shift that replaces the traditional civic education with an education for citizenship and the practice of democracy.

1.1. Youth today has a higher literacy level and more access to primary, middle and higher education than the generation that preceded it. Nevertheless, many young Hondurans still experiment exclusion processes in the educational arena. The income of the household of origin of young Hondurans continues to be a decisive factor in their educational achievements. The reduction of these disparities is crucial for the achievement of equality, youths' citizenship building and human development.

In 2008, the illiteracy in youth was 7.2%, lower than the national average of 16.6% and had lower incidence in the urban setting and among young females. Notwithstanding, in the last few years, a significant progress has been made in alphabetizing youth in the rural sector. Among other factors, this increase is the result of a joint effort made by literacy and basic education programs, such as the

Literacy and Basic Education Program for Youths and Adults in Honduras (PRALEBAH, Spanish acronym), the Education For All Program (EDUCATODOS, Spanish acronym) and the literacy project "Yes I can".

Youth illiteracy was reduced in the rural sector by 9 percentage points in 18 years (1990-2008) a sustained, vigorous and massive effort could eradicate youth illiteracy altogether in a shorter period of time. This is an important task that the Honduran State and society must unavoidably undertake.

A percentile reduction also occurred among young Hondurans who do not have any educational level and an increase in their level of school attendance. According to 2008 data, 94.2% of male and female youths have completed their primary education, 45.7% their secondary education and 6.7% have gone on to a higher education level. Young females surpass young males in primary, secondary and superior education levels.

Despite the advances in the education levels of young Hondurans of this generation compared to any previous generation, there is still a pattern of inequality closely associated to structural variables of the households of origin. As shown in Table 1, the first income quintile has the largest proportion of uneducated youth (13.0%), while youth in the fifth income quintile, only a very small proportion (1.0%) has no formal education. In terms of higher education, only 0.5% of youth from low income households said to be in university while for youth from high income households the percentile reaches 25.2%.

These inequalities are no obstacle to recognizing the progress made in education in the last fifteen years, reflected by the increase in the average years of schooling in the youth's population. According to 2008 data, young Hondurans have 6.7 average years of schooling compared to the over 30 year old, with an average of 5.0 years. Emphasize on the massification of secondary education using conventional and unconventional means would be the most reasonable option to significantly increase the average years of schooling of young Hondurans and therefore, of future adults.

According to data from the ENPDH 2008 and as shown in Table 2, the educational gaps between indigenous and Afro-Honduran groups occur most frequently among the young Hondurans belonging to rural and urban ethnic groups. The latter experience an especially higher level of exclusion in secondary education. For reasons of equity, it is crucial for the country to promote

affirmative action that allow ethnic groups of the rural sector to improve access to secondary and higher education.

1.2. *Honduras faces enormous challenges in terms of coverage and quality of secondary and higher education. It is necessary to approve regulations that make secondary education compulsory and expand the education through conventional as well as unconventional forms, given that in the world of globalization and knowledge society, this academic level constitutes the minimal education threshold to leave poverty behind. It is vital to improve the quality of secondary and higher education by means of adopting paradigmatic changes that favor learning over teaching, mutual understanding, respect for diversity, pluralism, the negotiated resolution of conflicts, etc.*

Honduras, along with Nicaragua and Panamá, is one of the three Latin American countries where secondary education is not compulsory. By 2008, ninth grade coverage was 43.4% and 25.7% for the diversified cycle. The low secondary education coverage is especially serious in the rural area where coverage of the diversified cycle is 15.2%, representing less than half of this same coverage in the Central District (41.4%), in San Pedro Sula (40.5%) and in the rest of the urban setting (36.5%).

A good way to overcome the rural-urban gap and to expand the offer of secondary education is strengthening the existing unconventional and flexible education programs and introducing new programs. Among the existing alternative experiences to expand the third cycle of basic education and the diversified cycle is EDUCATODOS, PRALEBAH, the Honduran Institute for Radio Education (IHER, Spanish acronym), the Tutorial Learning System (SAT, Spanish acronym) and the System for Middle Distance Education (SEMED, Spanish acronym). Among the new programs that can be proposed are the Rural Alternative Centers for Technical Formation from Peru that combines studies with work in the rural areas and the Secondary for All from Chile that serves young Hondurans from very low income households and in situation of educational risk.

The higher education system in Honduras is comprised by 19 universities, 6 of which are public and 13 are private. The net coverage in higher education has almost doubled between 1990 and 2006, from 7.6% in 1990, to 14.5% in 2006. Despite the advance in coverage, higher education in

Honduras is still a long way from other countries such as Costa Rica, whose coverage in 2005 was 45.6%, the highest in Central America.

As in secondary education, higher education has to adapt to the paradigm shift that calls to substitute the teaching culture with a learning culture and the development of skills and competencies with autonomous learning, the development of critical thinking and the capacity of "learning to learn" throughout a lifetime. The following are also part of the paradigm shift: i) the idea that secondary and higher education must promote and develop peoples ability of innovation and creativity, the capacity for entrepreneurship, leadership and team work, the use of information and communications technologies (ICTs); ii) the promotion of a learning aimed at mutual

understanding, the respect for diversity, pluralism and the negotiated resolution of conflicts, the capacity to act pursuant to the canons of justice, transparency, honesty, respect for human rights and the promotion of democracy, solidarity and responsible participation, and, iii) the development of identity and independence, the capacity for personal projection, empathy, respect for the people's dignity and the promotion of behaviors sustained on ethics.

As shown in Chart 1, 24.8% of the young Hondurans that participated in the ENPDH, 2008, identified the preparation, capacity and dedication of teachers as the key factor to obtaining quality education. Next in importance is having technological resources in the education centers, such as computers and internet (11.5%), a pertinent education aimed at what the country needs (11.4%), delivering the programmed number of class hours (10.5%), availability of adequate infrastructure in the education centers (8.6%) and involvement of the family in the education process (7.2%). The perception of young Hondurans is congruent with the great importance that the international bibliography places on preparation, capacity and dedication of the teachers.

The availability of the information and communications technologies was second in the preferences of young Hondurans. However, only 16.1% are internet users. The largest number of users has secondary education (26.4%) and higher education (78.5%). Internet is barely used by young Hondurans with primary education (1.6%) and users with a higher education almost triple the number of users with secondary education. There is also a huge gap between the first income quintile (1.7%) with access and those in the fifth income quintile (35.0%). From this perspective, the lower income sectors are at a huge social disadvantage compared to youth in the higher income quintiles. This challenge should be firmly dealt with for essential reasons of equity in accessing the tools of the information and knowledge society.

On the other hand, there is a large gap between youth from a high socio-economic level that have access to computers (79.5%) in their education centers, and the ones from low socio-economic level that only reach 16.5%. This same pattern of exclusion is evident in the access to internet in education centers, with only 5.8% with access in the lower socio-economic level. This situation of inequity impacts the students' academic performance given that 71.5% of young Hondurans use the internet for studying or for homework.

This unequal access to the new information and communications technologies contributes to increasing social inequalities, benefiting those who already had an advantageous position and deepening the learning gap of youth in social disadvantage. Consequently, it is necessary to reduce the gap that separates the integrated from the excluded in the use of this vital tool in the society of today's globalized world.

1.3. A significant percentage of young Hondurans, especially in the popular sectors, do not work or study and these become the most excluded of the excluded. 30.3% of young Hondurans were in this situation in 1990 and 25.4% in 2008. This group in 2008 was composed of 750,000 young Hondurans. Young Hondurans who neither work nor study have few possibilities to incorporate into flexible vocational training programs, since the offer of this type of services is relatively low.

According to data of the Permanent Household for Multiple Purposes Survey in 2008 (EPHPM, Spanish acronym), 36.7% of young Hondurans were only working. The group of young Hondurans that only studies (30.1%) is in second place and third place is comprised by the group of those who neither work nor study (25.4%). It is alarming that in the year 2008, more than 750,000 young Hondurans are neither studying nor working. The group of young Hondurans who work and study is a minority (7.8%).

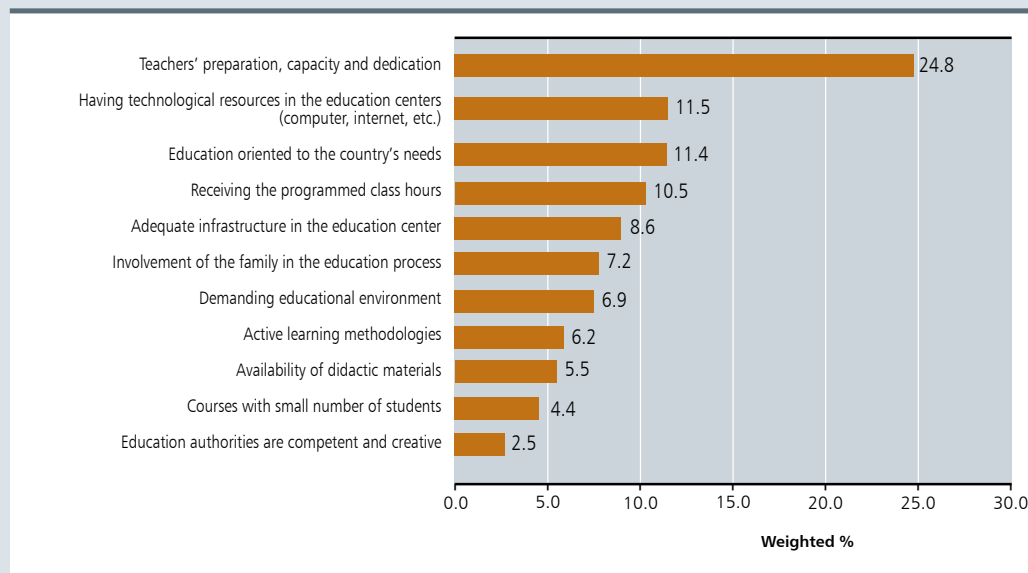

When asked about the education level achieved by young Hondurans who said they do not want nor are not interested in studying, it stands out that 74.3% of them have only attended some level of primary education, which can be interpreted as perception of lack of pertinence, relevance and of massive flexible alternatives to incorporate into the secondary education level.

The provision of training services and technical and vocational capacity building is extremely low, leaving few opportunities for inclusion of young Hondurans who neither work nor study. 78.3% of young Hondurans who participated in the ENPDH, 2008, stated that they had not received any type of technical or vocational capacity building or training prior to entering into the labor world. A mere 21.7% of the interviewed manifested they had received training before entering into the work force.

This afflicts the urban as well as the rural sectors. The lack of vocational technical training has a stronger effect on the low income youth than

Graph 1

Reasons that young Hondurans considered important in obtaining a quality education. (Percentage of youths that are studying or have studied at some point)

Source: Based on INE's data base, EPHPM 2008.

on those from a medium and high socioeconomic background. The gap between the low and high socioeconomic indexes is significant, with a differential of 28.7 percentage points.

The main institutions that offer these services of vocational training are the Institute for Professional Formation (INFOP, Spanish acronym) and the Advisory Center for the Development of Human Resources in Honduras (CADERH, Spanish acronym). There are technical and vocational schools at the secondary education level but the supply of technical and vocational formation by conventional and unconventional means must be increased.

1.4. Honduras invests 7.2% of its GDP in education.

However, a little more than 80% of the budget allocated to the Secretary of Education and the National Autonomous University of Honduras (UNAH, Spanish acronym) is spent on wages and salaries, leaving very little for investment in infrastructure, projects and educational innovation and extension.

It is necessary to make public spending in education more efficient. This implies a real improvement in quality of learning and in teachers' commitment to quality learning. Neverthe-

less, when analyzing the results of students that graduated from secondary education who took the Academic Aptitude Test for admission to the public university (UNAH) between December 2006 and September 2008, the deficient quality of the received education became quite evident since 95% of the students obtained low and intermediate scores and only 5% received high scores.

The other pertinent issue, derived from the budget analysis, is the strong limitation of financial resources for a real investment in the sector. This keeps young Hondurans from having adequate education facilities with sufficient technical and laboratory equipment of quality, computer equipment and internet networks, with virtual and physical libraries that open the door to knowledge in a globalized world, with video conference equipment that allows them access the teachers of diverse school centers and renowned universities, with subscriptions agreements with entities that make the learn-by-doing methodology feasible, etc. All these things will continue to be unavailable for young Hondurans as long as resources for the educational system are not efficiently distributed, well used and the budget allocation for investment is not increased.

Table 3

Economic Growth vs. Employment (2003-2008)

Variable	2003	2004	2005	2006	2007	2008
Economic Growth	4.5	6.2	6.1	6.3	6.3	4.0
Enemployment rate	5.4	5.9	4.8	3.5	3.1	3.0
Visible Underemployment	5.6	6.9	9.1	5.0	5.1	3.8
Invisible Underemployment	29.4	29.5	32.2	29.6	33.2	28.8

Source: Based on INE's data base, EPHPM and Honduras Central Bank data.

1.5. A democratic society needs to have citizens who are conscientious, convinced and have the capacity to fulfill their duties and exercise their rights. Education is called upon to play a predominant, irreplaceable and urgent role. Therefore a paradigm shift is necessary to substitute the traditional civic education with an education for citizenship and the practice of democracy.

Education for citizenship and the practice of democracy should not be a theoretic class. It should be a cross section based on the active involvement in issues of the communities' collective interest. Education for citizenship should be an interdisciplinary and transversal subject, participatory and not merely conceptual and instructive, interactive and not repetitive and linked to the student's vital context and in a democratic and not an authoritarian environment. Education has a fundamental task to perform related to building the national identity, especially in times like ours in which it seems that we are headed toward a homogenization of a globalized culture due to the development of the communications and information technologies.

2. In spite of the annual average economic growth level (5.8%) experienced in the period 2003-2008, the Honduran economy has not been able to generate a sufficient number of decent employment for young Hondurans. The main labor problem of young Hondurans is not open unemployment but invisible underemployment regarded as the privileged space of employment instability. Underemployment is a relevant factor in the social exclusion of young Hondurans, that outlines the absence of socioeconomic and labor conditions related to low productivity, employment instability and even the irregular international migration that is taken as a way out of these problems. These aspects, being interrelated with the spheres of edu-

cation, citizen participation and social risk situations, affect the process of building and expanding their citizenship and influence the levels of human development.

2.1. The report recognizes the reduction observed in the open unemployment rate and in the invisible underemployment during the period 2003-2008. The first was reduced from 5.4% to 3.0%, and the latter from 29.4% to 28.8%. Nevertheless, it is also confirmed that the expansion in economic growth has not been translated into an expansion in the formal labor market and therefore the invisible underemployment of young Hondurans continues to be very high.

Table 3 confirms an average annual growth rate exceeding 5% in the 2003-2008 period, yet the invisible underemployment was barely reduced by a 0.6 percent points.

Some of the elements that explain this asymmetric behavior between economic growth and employment generation come from the origin of the growth itself. When making the analysis of expenditures for the period between 2003 and 2008, using constant prices, it's clear that consumption expenditure has tripled above compared to the formation of gross fixed capital. When making the analysis by productive sectors, it is evident that the most dynamic sectors are not necessarily the most labor intensive sectors. Between 2003 and 2008, the financial intermediation, electricity, gas and water, and communications sectors were the ones that presented the highest annual average growth with 20.2%, 17.3%, and 17.1% respectively. Meanwhile, the labor intensive sectors such as agriculture grew by only 3.9%, construction by 4.6% and manufacturing industry by 5.0%.

2.2. Although the open unemployment rate for youth, between the ages of 15 to 30 does not seem to be too high, it is concerning that 4 out of 5 unemployed are young Hondurans between these ages.

The disadvantage for young Hondurans is clear when compared to the adult unemployment rate in 2008. Young Hondurans between the ages of 15 and 30, the percentage of unemployment at the national level was 5.7%; while for adults was 1.0% (INE, 2008). Gender analysis highlights that the most affected segment is young women, with an unemployment rate of 6.4%, compared to 5.3% for young men and 0.9% in adult women.

Table 4

Employment problems among youth (15 to 30 years) and adults employed, 2008 (%)

		Domain		Gender		National
		Urban	Rural	Men	Women	
15 to 30 years	Without employment problems	67.5	54.0	56.8	67.2	60.4
	Visible underemployed	4.8	4.8	4.0	6.2	4.8
	Invisible underemployed	27.7	41.2	39.2	26.6	34.8
	Total	100.0	100.0	100.0	100.0	100.0
31 >	Without employment problems	75.5	54.8	60.0	72.7	64.9
	Visible underemployed	4.4	3.4	2.7	5.8	3.9
	Invisible underemployed	20.1	41.8	37.3	21.5	31.2
	Total	100.0	100.0	100.0	100.0	100.0

Source: Based on INE's data base, EPHPM 2008.

In geographic terms, unemployment affects more urban (7.1%) than rural youth (4.3%). Factors such as the lack of work experience and lack of quality education and pertinent technical or vocational training are relevant causes in youth unemployment.

By May 2008, the Unemployment Rate (UR) at the national level was 3.0% and 3.1% for 2006, lower than the rates in countries like Costa Rica and El Salvador. By May 2008, the unemployment rate for Young Hondurans reached 5.7%.

Most of youth unemployment is in the business, hotel and restaurant (30.2%), agriculture (29.8%), and the manufacturing industry (20.6%) sectors. In the case of the agricultural sector, the participation in GDP by the sector was 17.0% in 2002 but has fallen to 13.1% by 2008.

There is an important relationship between unemployment and the socioeconomic level of the household of origin, 66.8% of unemployed youths are from the first three income quintiles—the lowest income quintiles, and 30.8% of these young Hondurans are from the households with the higher income quintile (fourth and fifth quintile). This situation is explained by the fact that young Hondurans from higher income families reach higher education levels, their family economic levels provides support, and they can access social networks and enter employment at a later age and thus more fully enjoy the social moratorium.

2.3. The invisible underemployment is the main problem young Hondurans face in the labor market. It is the breeding ground for employment instability and a limit for expanding the capabilities and opportunities for young Hondurans to build their citizenship.

By May 2008, young Hondurans in the 15 to 30 age group were facing visible and invisible under-employment rates that were slightly higher (4.8% and 34.8%, respectively) than adults (3.9% and 31.2%, respectively). Invisible underemployment has been related to employment instability, and, according to the ILO, “precarious employment is related to the quality of the work, to the lack of employment stability, to the lack of social protection, the amount of earned income, duration of the work day and the difficulty in having a union that defends the interests of employees”.

An urban youth, 21, participating in a Focus Group in the central-eastern region of Honduras expresses his opinion on the precarious employment situation, indicating the following:

“many of us are students, sometimes the payment is scarce, sometimes miserable, the treatment we get is not adequate, they make us work more time, they hardly ever take overtime into consideration and sometimes that's intimidating”.

The problems of precarious employment which are reflected in the levels of visible and invisible underemployment are illustrated in Table 4, which demonstrates their seriousness in the country for young Hondurans as well as for adults.

For adults the visible underemployment tends to be somewhat higher in the urban setting than in the rural, while for young Hondurans it remains at the same level in both areas. Furthermore, the visible underemployment is higher among women than among men, for young as well as adults, although the opposite is true with the invisible underemployment because among adults as well as young Hondurans; it is much higher in the rural than in the urban setting, and among men than among women.

By May 2008, the visible underemployment among young Hondurans between 15 and 30 and in adults over the age of 31, showed similar levels in the rural area for both age groups (around 41%). Nonetheless, it is in the urban setting that this type of underemployment has more effect on youth (27.7%) than on adults (20.1%), indicating that young Hondurans incorporate into the work force under precarious conditions. When using a gender perspective, the invisible underemployment has a greater effect on young men than on young women, precisely because young men are more pressured to generate income due to economic necessity and the family's subsistence.

2.4. The higher the educational attainment, the higher the possibility of young Hondurans to enter successfully into the work force. Yet the high unemployment and underemployment levels in youth with a secondary and university education suggest a need for greater relevance between education and labor market demands.

In principle, the education level of young Hondurans should be a relevant factor for their incorporation into the labor market, and therefore having an educational background that is pertinent to the work activity that youth perform or wish to perform, is an important factor for their social inclusion, citizenship building and human development.

EPHPM data for May 2008 illustrates that of the employed young Hondurans in the 12 to 30 age group, 6.4% did not have any schooling and 54.7% had a primary level education. Undoubtedly, these are the sectors of the labor market that concentrate precarious youth employment, 31% of the employed have a secondary education and a mere 7.9% have higher education.

There are more unemployed young Hondurans with a secondary level education (45.5%) than those with only a primary education (41.4%) and higher education (8.3%). Although the EPHPM does not show data that allows articulating a reason for the unemployment phenomena, in the sectors with more education one hypothesis is the connection between the education's relevance to the needs of the labor market.

When analyzing the EPHPM data related to the visible and invisible underemployment in young Hondurans between 15 and 30 according to the last academic level, it is evident that the visible and invisible underemployment has a greater effect on young Hondurans without education (61.4%) and

those with a primary education (47.4%). Young Hondurans with a secondary education (24.4%) and a university education (13.5%) are the ones presenting the lowest levels of underemployment. This verifies that the higher the educational level attained, the higher the possibilities of incorporation into employment of greater work productivity and better income.

When asked regarding the work they do and the education or technical training they've received (through the ENPDH, 2008), 41.1% of young Hondurans do not see a connection between the education they received and the work they perform. In other words, the educational pertinence has not been all that relevant, and no doubt this keeps them from being employed in activities related to their formation. This could very well be indicative of the low salaries they earn, the low level of productivity and of their working hours.

The opinion of one young Honduran from a Focus Group of indigenous and Afro-Honduran in Catacamas, Olancho spoke of the pertinence of education in his work:

"I can understand that an education can be useful for the job; in some aspects I see that it's all right and in others it's not. The point is that each one of us studies several years, when we can and have the opportunity to do so, then we look for a job related to what we studied and we find it – and there's no chance of getting it because you're too young, or you don't have experience, you need a couple of more years – and they pay us really low wages. Often, we go for long periods without finding a good paying job. The other thing is that in order to work in what we studied for during all those years of efforts in schools and universities, we have to have the willingness and, above all, good conduct".

2.5. The underemployment and labor precariousness reduce youth's social moratorium.

The reduction of social moratorium in youth is produced when they prematurely incorporate into the labor market. The under-employed work longer periods for low wages, they do not have Social Security or pension systems, and lack the time and money to continue with their academic training. Graph 2 reflects the ENPDH 2008 results related to the age in which young Hondurans at the national level will enter the labor market. The average age is 15.1 years which, in many cases, thwarts their professional training process,

limits future opportunities for an adequate job placement, restrains their free time to carry out activities that are proper of younger years and from participating in issues of collective interest in their communities, as well as from enjoying the leisure time that is proper of that stage in life.

2.6. Family networks or personal contacts are more important than education and work experience for their entrance into the labor market.

Graph 3 shows the opinion expressed by young Hondurans in the ENPDH 2008 regarding the relevance of social networks or personal contacts for getting a job that will guarantee income and adequate conditions for their social inclusion.

It is somewhat worrisome that young Hondurans identify having contacts, especially family or personal contacts, as the main reason for obtaining employment, even above others such as having a high educational achievement, professional training or previously acquired work experience. This situation was also recognized as a constraint by a young person in the 19 to 24 age group and student from the urban area who participated in a Focus Group, who expressed the following:

“it’s not really a positive thing for the independence of young Hondurans to depend on family contacts or social networks to ensure a future in the work force, because work is a means for our development and we have to look for our experience on our own”.

3. The main cause of the international migration of young Hondurans who see the journey as an escape outlet is the precarious citizen condition characterized by, among others, unemployment and the lack of job opportunities. Being under irregular migratory conditions in a foreign land, young Hondurans cannot overcome the lack of citizenship given that their civil and political rights are constrained, even reaching the point of full denial of their rights via deportation. The Honduran men and women returnees represent an enormous asset for the country. The young Hondurans that stay behind perceive them as “the brave” that have risked their lives in the quest for an opportunity. The returnees believe in Honduras; they believe that the State and society can open the spaces they were denied.

3.1 The main reason why Young Hondurans migrate is an economic one.

As shown in Graph 4, 33.6% of young Hondurans interviewed in the ENPDH 2008, claimed that the main reason for them to consider migrating is the possibility of having more income and opportunities. 21.1% identified the lack of employment opportunities in the country as the main cause; 17.4% said it was the opportunity to send remittances to their family and 9.2% stated that they wanted to build a better future in another country.

Graph 4

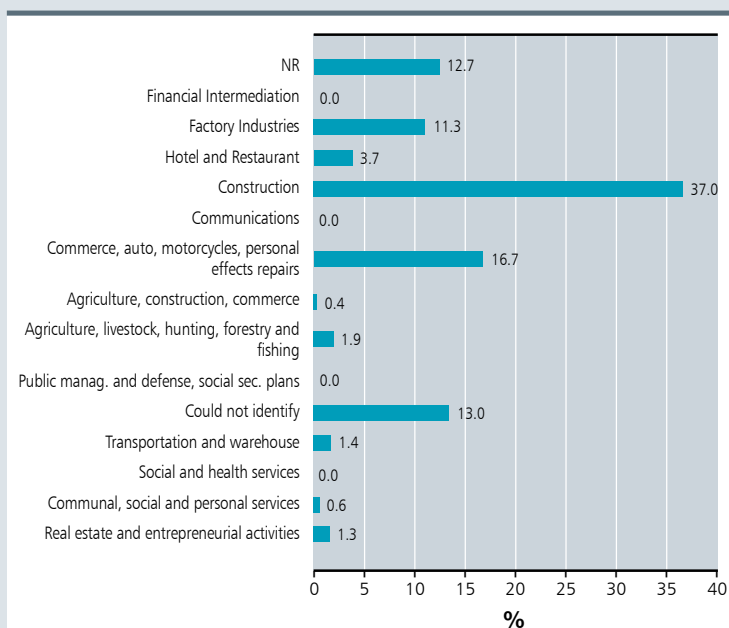

The most important reason a young Honduran would leave the country (Youths 12 to 30 years)

Graph 5

Economic activities that young returnees performed in the United States, 2008

Source: Based on CAM-R revised records. (NR= No response).

3.2 The returnees have an average age that positions them as a valuable human and productive resource for Honduras. They have demonstrated that they are an asset, even when under precarious conditions like the ones they face by being irregular migrants in other countries.

As shown in Table 5, the dominant profile identified in the young returnees reflects an average age of 24.7 years, are single, 31.8% have children, with a primary education level, without foreign language skills.

The return destination of young returnees, according to the data gathered for this report, is mostly the departments with larger cities such as: Cortés (20.1%), Francisco Morazán (19.4%), Yoro (9.8%), Comayagua (8.9%) and Atlántida (8.4%).

Due to their irregular migratory status, young returnees face marginalization in their countries of destiny. The Honduran Diaspora, in the countries of destination, has been important for the young migrants during their migratory journey, in their arrival and installation, in the economic and social aid and in their labor insertion. Almost half of the young returnees interviewed expressed the relevance of the support from the Diaspora to obtain employment. Four out of ten of these migrant youths lived with relatives and six out of ten would get together with other Honduran men and women.

During the time they worked abroad and even under precarious migratory conditions, the young Honduran returnees proved that they are a valuable human and productive capital for Honduras. The construction, business, manufacturing, services, hotel and restaurant as well as the agricultural sectors in the country of destiny have attracted many young immigrants due to their dynamic nature, and the income they generated was remitted to their families (see Graph 5).

The construction sector became the main source of labor insertion for a large number of young returnees and also accounted for the concentration of the highest incomes (90.5%), generating a monthly average of between US\$ 1,000 to US\$ 3,000 in 2008. In order of importance, this sector was followed by manufacturing (85.5%) and business (82.2%) with the same range of income (see Graph 6). Their entrance into these sectors was more related to the capacity of income generation for remittances to their families, than it was due to the training or capabilities they had acquired in Honduras in these same areas.

3.3 The young returnees are debating a dilemma.

On one hand they want to remain in Honduras with their families and have the opportunities for personal development and inclusion. On the other hand, they harbor the desire of returning to another country, even if it is irregular, given

that they may have left behind relatives, or had some economic assets when they were deported or because they consider that abroad they can obtain remittances faster for their families, despite the sacrifice.

When asked why they would not leave the country, the reason or answer that was recurrent the most was because they did not want to leave their families. Almost five of every ten young Hondurans will not leave their families, which is a social and cultural manifestation of their strong bonds to the family unit. They also consider that the high level of risk they face during the trip is a reason for not leaving the country under irregular migratory circumstances. Yet, the returnees face the challenge of providing for their families. A 21 year old youth in a Focus Group on employment and migration from the western region of Honduras, commented the following:

“Back in my home town there’s a girl that left to go work and she made good money but she also spent a lot, they deported her. She felt bad, wouldn’t talk to anyone, really sad. She got along with everyone before, she had gone to high school but she wanted to make a lot of money to help her parents who were poor. She went back to the United States, she went back with another idea in her mind, to be successful and she’s there again and it seems she got a job very quickly”.

The need to provide for the family exceeds the fear of personal safety and the pain of being separated from loved ones. In one of the Focus Groups, a 22 year old young man, from the rural area in the central-western region of Honduras, and from a lower middle socioeconomic background expressed that:

“We’re afraid of losing a relative because the trip is dangerous and can lead to losing your life or a body part, or that the relative will stay and we’ll never see him again, and the only comfort I have is that I was able to say good-bye”.

Young returnees want to get a job while back in Honduras. Seven of every ten young returnees in the survey expressed that they would do it because it allows them to not only generate the income to meet their needs and those of their family but also to face up to, in some cases, lack of money, paying off debts to the intermediary (coyote) or to whomever funded their immigration, among others.

Table 5

Characteristics of young and adult returnees in 2008

Concept	Youths 12 to 30 years	Adult > 31 years

The young returnees harbor the hope of finding social opportunities –educational and health- and employment. Almost eight of every ten interviewed returnees had the opinion that they should be given an opportunity for employment and income generation in Honduras, given that they return with knowledge and skills which can be put into practice to achieve higher levels of human development.

The young returnees interviewed expressed the view that the government sees them as persons who need support in order to stay and not return to the United State, but at the same time considers them as generators of foreign currency for the economy as well as an important human capital due to the skills acquired. In spite of these perceptions expressed by the young returnees, they also believe that the government regards them as persons who did not achieve their purpose and that this can restrict them in their insertion into society.

Moreover, young Hondurans in a focus group stated that the government has its limitations and, to a certain point, lacks the willingness to support the creation of technical skills in young

Graph 6

Monthly income distributions of young returnees by economic activity, 2008

Source: Based on CAM-R revised records.

Hondurans and make good use of these skills to contribute to the country's development. An 18 year old woman from the central region, and from a middle socioeconomic background made the following comment:

“Look, an opportunity for formation and to get a better job should push the institutes (secondary schools) to have more technical careers because, for example, in my home town the education only goes to ninth grade. We still don't have any trade levels yet although people are struggling to get this education but it hasn't happened yet: then if we did have technical careers and if the government helped in this, young Hondurans wouldn't leave the country. They could stay and work right in their places of origin or in another city where we could grow and everyone in town would make it better and there would be progress. But what happens is girls finish the ninth grade and then get pregnant, and this is another burden for the family. What's more, in some cases they don't even graduate from this level and even decide to leave the country after their babies are born, they leave them with their parents and leave to make money and send it home”.

3.4 Young returnees are regarded in a positive manner by the great majority of young Hondurans.

As graph 7 illustrates, 84.6% of young Hondurans between 12 and 30 years of age interviewed in the ENPDH 2008, stated a very favorable opinion of the young returnees. 50.3% indicated that they

should be supported so they can prosper; 15.2% think they are brave; 11.1% expressed that they deserve respect for what they did and 8% indicated that these young Hondurans returned with skills that can be put to good use.

4. This report affirms that the country's youth is suffering social exclusion in different spheres. Nevertheless, young Hondurans have an important potential to revert this situation and improve their citizen status and the country's levels of human development. This makes it crucial for the Honduran society, its institutions in general, and the political parties in particular, to recognize and assume that young Hondurans are the present and future of the country; they are strategic agents of development, indispensable elements to achieve an inclusive and democratic State project.

4.1 The Honduran landscape reflects a hybrid cultural model of youth citizenship in where apathy and distrust toward the institutions come together with the desire to act constructively to improve the Honduran reality.

The high levels of distrust manifested by young Hondurans (see Table 6) are reflected in their low levels of citizen participation. But even so, young Hondurans believe in their capacity to make changes, showing a high level of intentionality and the desire to participate for the sake of securing a better future. Due to the latter, and beyond the classic and simplistic statements that portray young Hondurans as passive participants, it seems that the huge complexity of the sociopolitical lives of young Hondurans cannot be denied. Therefore, we cannot make the classic adult-centered mistake of portraying these young Hondurans as uninterested and individualistic social actors who have no concern whatsoever about what is happening around them. Much of the data from the ENPHD 2008 demonstrates quite the contrary, showing that Young Hondurans are very interested in collective issues of society in which they live and interact, and are willing to work for the good of the country.

In this regard, in order for the Honduran democracy to function adequately, its citizens must adopt a democratic political citizenship culture. This democratic culture should be reflected in the trust toward politicians, public institutions and in a civic culture of commitment to equity and to justice.

Hence, young Hondurans must trust the country's institutions and its actors in order to promote youth citizen participation and their involvement in public decision making.

But conversely, the data shows an estrangement or indifference toward politics and, above all, toward the country's political parties. Young Hondurans seem to show an indifference to the political system that governs them, be it democratic or authoritarian. Due to this, it becomes necessary to understand that the political culture is directly related to and influenced by the socio-political, economic and cultural context in which Young Hondurans unfold; and that, according to the answers given by young Hondurans, reflect high levels of distrust toward the classic political institutions (Government institutions, political parties, unions, etc.). Therefore this level of distrust toward public institutions can be explained by the connection that young Hondurans establish between these and corruption. As shown in Graph 8, 93.7% of young Hondurans perceive that there is plenty or too much corruption in Honduras.

Taking this last point into account, it is important to highlight the fundamental role that a participatory democracy can have for the country, a democracy of men and women citizens; a model of an inclusive democracy in which the country's youth feel identified and participant of the reality that surrounds it. This is the way in which youth can acquire independence and, what's more important, it can actively practice its rights and obligations as a strategic player of society.

4.2 Young Hondurans are not as selfish as generally thought. There are clear signs that youth is not passive or pessimistic and, quite the contrary, they show concern and desire to participate in social and political initiatives seeking the common good.

The first step to achieving advancement for the inclusion of young Hondurans' is that Honduran society trust its youth. It is made clear throughout the report that young Hondurans want to commit, but to allow them to commit freely we must fight against social exclusion by promoting opportunities and skills; we must open spaces for youth citizen participation; we must also understand the new way or motivations that young Hondurans identify with, substituting the classic models of adult centered participation and organization.

The general scene of youth citizen participation in Honduras is promising. Table 7 shows that there

is a relatively ample citizen participation scenario. Specifically, 58.3% of the young Hondurans stated that they are participating in some type of social or political organization or association, surpassing the average youth's citizen participation in other Latin American countries which have an average between 5 and 20 percent. From a gender perspective, there is a significant difference of 11 percentage points in citizen participation; 64% of

Graph 8

Perception of the Honduran youth regarding the country's existing corruption level

Source: Based on data from ENPDH 2008.

the young males stated their participation versus only 53% of young females.

Some of the reasons that could explain the difference of participation between men and women are reflected in the perceptions shared by some of the young women in the Focus Groups:

"I study and work helping my parents with the household tasks. I help my mother with everything she has to do around the house. No, I don't participate in any organization". Young woman, between 12 and 18 years, rural area.

"I'm a single mother, I study and work. The only thing I can participate a little is in some church activities". Young woman, between 19 and 24 years, rural area.

"I come from the Merendón municipality. I work helping my father tend to the land, cleaning the farm, planting corn, beans, etc. No, I don't participate in any organization either". Young woman, between 12 and 18, rural area.

Concerning the participation of young Hondurans from indigenous and Afro-Honduran background, in comparison to the rest of Young Hondurans, it is interesting to note that the former show higher participation indicators than the latter. One of the possible explanations for this difference in participation levels could be the fact that young indigenous and Afro-Honduran, due to their experiences in a more enrooted cultural context, have a higher level of community commitment, preserving certain cultural values and a more elevated social conscientiousness that constitute the foundation of their own political

culture. Yet, it seems that in other more urban spaces, these community values or principles have weakened.

The analysis of the data shows that Young Hondurans have a certain interest for solidarity and humanitarian values. It points out how the young Hondurans of today are interested in committing to more universal and symbolic values than in the classic ideological matters. In some way, they feel attracted by the more informal and less traditional associative models. Although for the time being, this is not reflected by a high increase in the young Hondurans' participation levels.

Although young Hondurans are interested in committing and want to participate as citizens in sociopolitical initiatives that pursue the common good, they will do so provided they are offered adequate spaces for their perceptions and ways of action and, above all, they will participate provided they are not manipulated or used. All things considered, if high levels of human development are to be achieved, it is crucial to reduce the social exclusion of youth by increasing their participation, since this is a fundamental element that gives shape to citizenship.

4.3 The distrust in politicians and the disaffection of politics makes the youth further distance itself from a trait that is fundamental in a democracy, participation in political issues. It is therefore necessary to modernize the traditional political practices, implementing other practices that are more innovative and participatory, and closer to reality.

Democracy and politics are ingrained elements in current societies, including the Honduran, and citizen participation is one of the core elements sustaining modern democracies. Citizenship is an inevitable condition for achieving a healthy democratic society, in addition to being a right and a duty. In this regard, participatory democracy assumes the overcoming of the causes or sources of exclusion. From this inclusive logic, the young citizen participates, acquires independence and, above all, increases its agency in pro of the country's human development.

As shown in Graph 9, there are no great differences between young Hondurans from indigenous and Afro-Honduran and the others, in terms of the reasons for which young Hondurans are not interested in politics. Both groups perceive that politics is not in their interest because it does not benefit them and they also manifest distrust in

the capacities of the current political parties in the country.

It is again reflected that the Young Hondurans exhibit a certain weariness of the political power. All of this is mainly due to the lack of trust and the perception of young Hondurans on the high levels of corruption that exist in the country.

All things considered, it is necessary to modernize the traditional political practices and it is urgent to have a new way of thinking and of doing politics.

4.4 Volunteer service is one of the strategic ways to turn young Hondurans into strategic agents for development. It is a privileged space to exercise youth's citizenship in which rights and duties are balanced.

Thus, young volunteers can deduce a new orientation of the political space, more attractive for the new generations, facilitating their inclusion into the country's political spaces. On the other hand, it is also positive and notable that the image that adults have of young Hondurans can be enhanced through volunteer activities, increasing the levels of trust while strengthening the intergenerational relationships.

The report's data on young Hondurans volunteers is positive and Graph 10 illustrates that 33.6% affirm they have worked as volunteers to contribute to their community while 39.2% manifested they have not volunteered but would be interested in participating. It's clear that the

majority of young Hondurans are inclined toward solidarity activities and that they would participate, or show the desire to participate, in solidarity initiatives for the common good.

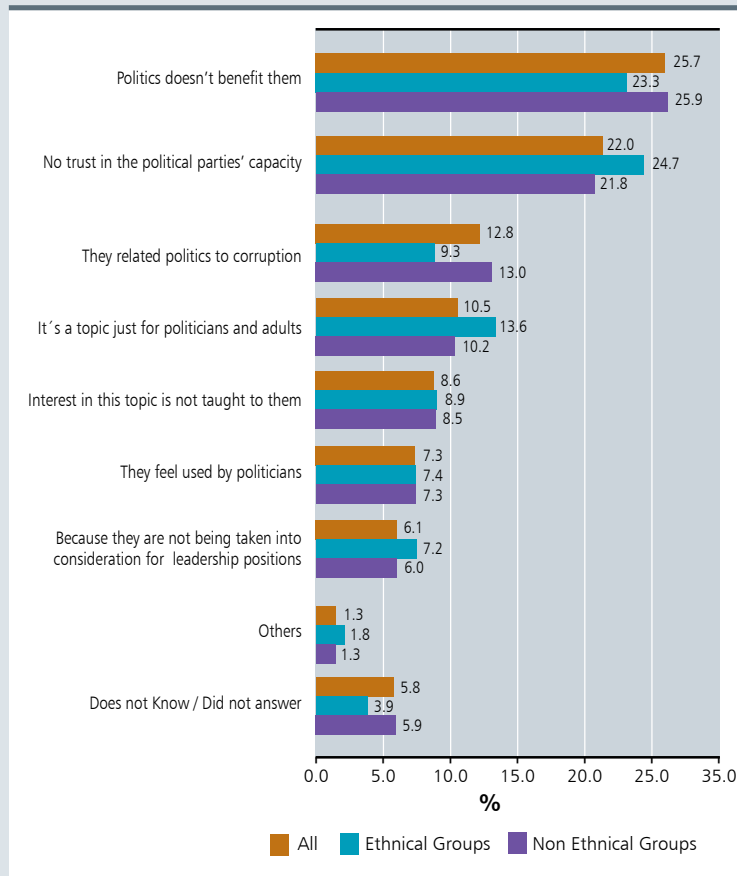

Meanwhile, it's important to understand that voluntary service is a good expression of citizenship, a practice of citizenship where the young volunteer is a protagonist and not just a dependant. Being a volunteer is also positive because it allows young Hondurans to interact with the reality in which they live and try to transform it, giving way to asserting their rights and the practice of their responsibilities. However, this must be developed in a framework of a sustained and long term public policy that acknowledges the voluntary service as a form of citizen participation and citizenship building.

4.5 The "local" space is a privileged area for the promotion of youth citizen participation and thereby overcoming the social exclusion, contributing to the process of building an active citizenship.

The political decentralization processes can make it easier for the citizens to feel closer to local authorities, to have more trust in these institutions and, above all, it can make young Hondurans increase their independence and make them take more interest in participating as citizens within their municipalities. In many ways, decentralization is a political process that can facilitate strengthening local institutions, bring politics closer to young citizens, and enhance the demo-

Graph 9

Reasons why young Hondurans are not interested in politics

Source: Based on data from ENPDH 2008.

cratic governance of the country as a whole.

According to the data gathered in the ENPDH 2008, young Hondurans who showed interest in participating in elective offices, both the indigenous and afro descendents as well as young Hondurans not belonging to either of these groups, consider that the fundamental reasons for this choice are: a) they believe decentralization is the best way for solving the communities' problems, and; b) they consider municipal politics to be a privileged space for positioning issues concerning the decision making on issues that affect youth (see Graph 11).

The answers illustrate the interest of young Hondurans in the decentralization processes that is occurring in the country. Therefore, it is indispensable to incorporate young Hondurans in these processes, not as passive recipients but as main protagonists.

4.6 The citizen participation within the process of citizenship building is a privileged path to overcome social exclusion of young Hondurans and to promote human development.

Citizen participation is a way of rebuilding the public sphere, it is a practice that brings meaning to the lives of individuals within the collectivity, transforming while improving the other basic dimensions such as education, health, employment, etc. This serves the purpose of reaching higher quotas of human development by broadening the dignity of communities and of individuals.

When speaking of citizen participation, there is a direct reference to a participatory democracy that offers citizens the possibility to decide on the public matters that affect them. It is about models that are more participatory and inclusive and it definitely is about building democracies that are more democratic, emerging from participatory action. Therefore it is fundamental to admit the challenges that could be inferred by youth participation and civic action. If the country's human development level is to improve, the youth citizen participation is a privileged path to do so and society and the State must accept this challenge.

5. This report has confirmed that there is a comprehensive group of young Hondurans in addition to being excluded, are facing a set of risks that affect not only the quality of their lives but also threatens it seriously. The

report reveals that among these risks are early pregnancy, HIV/AIDS, and violence. The social risk becomes a disabling factor for the practice of youth citizen participation. There is a need for inclusive dynamics that place young Hondurans as the main protagonists. Public policies must become channels of social mobility. The State and society have a “second chance” to guarantee citizenship building and the human development of young Hondurans in social risk.

5.1 Honduras has one of the highest pregnancy rates for young women between 15 and 19 years of age in Central America. Pregnancy is, by far, more common in young Hondurans with a low educational achievement and coming from households with low incomes. The consequences of an early pregnancy, identified by the same young Hondurans, contribute to perpetuating the patterns of exclusion of youth in this situation.

The “State of the Region” Report (State of the Nation Program, 2008) concludes that almost 20% of women under the age of 20 in countries like Guatemala, Nicaragua and Costa Rica have experienced childbirth. The percentages reported by Honduras are even higher than the regional estimates. The percentage of girls between the age of 15 to 19 that are either pregnant or have given birth reached 28.5% in 2001, according to the 2001 National Survey on Epidemiology and Family Health (ENESE, Spanish acronym) and 21.5% in 2005-2006, according to the National Health Survey (ENDESA, Spanish acronym).

A close association between the educational level and early pregnancy has been evident. For example, of the young women between 15 and 19 without education 46.3% are already mothers or have been pregnant for the first time, while only 2.2% of the young women from the same age group with higher education have been pregnant. The situation is similar in accordance to the income quintile or the quintile of wealth. In the lowest quintile, 31.3% of young women in Honduras have been pregnant while in the highest quintile the percentage is only 9.6% (see Table 8). This leads to thinking that a greater investment in education and in the creation of employment, as well as compensation measures for young Hondurans from the lower income households and with a lower cultural capital, could contribute to reducing early pregnancies.

According to results from the ENPDH 2008, more than 25% of young Hondurans had the

opinion that the main consequence of an early pregnancy, that affects both the child’s father as well as the mother, is the difficulty to continue studying. Young Hondurans also confirm that early pregnancy disrupts the possibility of a full human development of youth, since this situation excludes them from many opportunities.

Once the early pregnancy occurs, the chal-

challenge is to continue advancing in the inclusion of the young pregnant woman into the education system.

“Before, the schools limited a girl’s possibility to study, but today there are no limits in secondary schools. I have not seen any in Olanchito and there are no limitations because before they could only study in night school, but now they can also

study during the day and the girl doesn’t need to lag behind but can continue forward. (Focus Group 47).

“Now there are many programs that allow them to continue forward, like the Honduran Project in Support to the Basic Education (PRALEBAH, Spanish acronym). From the year 2000 until now, they (young women) are allowed to continue their preparation. I hope the girls do continue to carry on and that the government does not give up. In my opinion, they should continue looking for strategies and methods for us to continue ahead”. (Focus Group 39).

In addressing the consequences that fundamentally affect women, as shown in Graph 12, 29.5% of young men and women deem that the risk for the lives of mother and child is another of the large consequences of early pregnancies, revealing the existence of a certain level of awareness among young Hondurans regarding the risks of these pregnancies on the woman’s health. Another 19.2% of the polled mentioned that an important consequence is that the young woman was duty-bound to assume a responsibility for which she was not prepared. Among the consequences stated just for young men, it was found that the fifth part of the interviewees coincide in affirming that the life of the young male does not change when he gets a girl pregnant –an opinion that is even higher among young women (24.8%). Through these answers, Young Hondurans are demonstrating the very unequal cultural patterns of responsibility between men and women toward an early pregnancy and the feminization of the responsibility derived from an early pregnancy.

Other difficulties identified by the Focus Groups in association with early pregnancies, were the young woman’s family’s rejection of the young man, the generational barriers of understanding that limit the mitigation of the consequences of early pregnancy, and the possibility of choosing an abortion when not knowing how to face the responsibility of an unplanned child.

The same young Hondurans also recognized the importance of strengthening ethic and moral values (26.9%), and having access to sexual and reproductive health education with the purpose of diminishing the risk factors that lead to an early pregnancy (see Table 9). It was also stressed that young mothers should be supported, so that they do not drop out of school, in promoting their social integration. Finally, young Hondurans also

stated that the State should guarantee efficient services and opportunities for youth that have faced an early pregnancy.

5.2 HIV and AIDS substantially reduce the social moratorium and, furthermore, the life moratorium of youth, seriously. It affects substantially the young population in Honduras. The social integration of young Hondurans affected by HIV and AIDS depends to a large extent on the correct knowledge of the general population about the disease and on having a more integrative attitude toward the affected young Hondurans.

Honduras is one of the countries with the highest incidence of HIV & AIDS in the Central American region (State of the Nation Program, 2008). Table 10 illustrates that young Hondurans between 15 and 29 years are the group most infected by HIV, followed by the age group from 30 to 44 years with 33.4% of the HIV cases registered from 1985 to 2008. However, in the case of AIDS, the age group most affected is the one from 30 to 44 years that registers 42.8% of the cases, followed by the 15 to 29 years age group which represents 36.2%.

One of the interesting aspects to inquire in this report was the attitude of young Hondurans in general toward those young Hondurans infected by the virus. The results of the ENPDH 2008 show a positive balance since roughly 3 of every 10 young Hondurans mentioned the need to distance themselves from infected persons or to take some sort of preventive measure when having to relate to an infected person. Around 66% mentioned that the disease would not produce any change in the way they treat an infected person or even further, would create more sensitiveness and solidarity.

Analyzing the data in more detail we discover that 27.5% of young Hondurans living in the rural area and 30.1% with a low socioeconomic index (ISE, Spanish acronym) expressed an attitude of detachment; in contrast, only 7.6% of young Hondurans living in San Pedro Sula and 8.1% with a high ISE answered the same way. Moreover, insofar as the education level increases, there is also an increase in answers with a more positive attitude toward infected persons. For example, half of young Hondurans with a higher educational level answered that their treatment would remain the same, while only one quarter of young Hondurans with only a primary level education gave the same answer. The positive correlation between a better economic situation, a higher educational level

Graph 12

Perception among young Hondurans on the most important consequence of an early pregnancy in young women and/or young men

Source: Based on data from ENPDH 2008.

and a more comprehensive and correct attitude toward infected persons has strong implications on the importance of education and action to raise awareness as a strategy to enhance the attitude of young Hondurans toward other young Hondurans who are victims of HIV & AIDS.

As shown in Table 11, among the actions that young Hondurans themselves suggested as preventive measures against HIV & AIDS infection, the most popular were education and counseling for prevention. Awareness campaigns and talk sessions for the prevention of HIV were suggested, including themes like discrimination, sexual violence and other related issues. Another group of young Hondurans stressed the need for mobile laboratories for free HIV testing, especially for places that have difficulties in accessing this type of service.

5.3 Honduran youth is a direct victim of the country's prevailing violence. Young Hondurans consider that the main causes for the increase in violence are structural, mainly poverty and social exclusion experienced by a large portion of the Honduran population. Violence restricts public spaces, citizenship building and the human development of Young Hondurans.

Of the available data, the information from the Violence Observatory is the most reliable for conducting an assessment on the levels of violence in the Honduran society. According to the data, the percentage of deaths due to homicide in the 15 to 29 years age group is very similar to the adult rate of homicides in the over-30 year's group. In 2007, the percentage of young Hondurans in this age group was 48.1% and in 2008 it was 49.6%.

By 2008, the largest number of cases occurred in the 20 to 24 years age group (819 cases), followed by the 25 to 29 years group (802 cases). The number of fatalities due to homicide in the 15 to 19 years group was considerably lower than in the 20 to 29 years group. In the case of women, the number of fatalities by homicide is relatively low when compared to men, revealing that men are more prone to violent solution of interpersonal conflicts.

When inquiring among the same young Hondurans about the principle causes for the increase in violence (see Graph 13), 27.6% identified poverty and social exclusion. Adding another 16.5% that stated the lack of opportunities, leads to the assumption that more than four of every ten identified that factors of a structural nature are responsible for the violence. On the other hand, 26% of young Hondurans identified the 'maras' (organized youth gangs) and juvenile gangs, while 10.4% pointed to family violence. Either directly or indirectly, all of this is related to the casualties derived from the contexts of social exclusion and poverty that exist in the country. There is no denying that situations with extreme inequalities provoke violent social contexts due to the unfair realities in which the majority of the population has to live, or to use a better word, has to survive.

The young Hondurans living in rural areas had a higher proportion of answers related to poverty and social exclusion (30.7%), while it was the young Hondurans interviewed in the Central District (capital city) that mentioned the 'maras' and juvenile gangs (29.2%). This is due to poverty being greater in the rural than in

the urban area and that the question of 'maras' and juvenile gangs is more of an urban problem and less present in the rural setting. From an age group perspective, in the higher age groups the perception of "poverty and social exclusion" increases, while in the 12 to 18 years age group the problem of 'maras' and juvenile gangs is at the forefront. One reason for the latter is that young Hondurans in this age group feel they are more vulnerable to mara or gang members who prefer to recruit young Hondurans in this age group more than in the others.

On the contrary, the link between poverty, social exclusion and violence could be better perceived by young Hondurans in older age groups since they face other problems with greater intensity, such as labor insertion, meager income generated by precarious work and having children and family responsibilities they must fulfill.

Young Hondurans were asked about the places or spaces where they visualize more violence and almost 8 of 10 indicated that there is more violence on the streets, followed with a considerable distance by the jails (9.9%) and households (5.4%) while the remaining answers did not even reach two percent. There are several small variations among the different groups, for example, there are a slightly larger percentage of women (6.6%) than men (4.1%) who believe that the household is the most violent space. 14.6% of young Hondurans living in the Central District answered that it was the jails. When increasing the young Hondurans' ISE, there is also a consistent increase in the proportion of answers that mentioned households and jails; but, in general, there is consensus in identifying the streets as the most unsafe place.

The latter brings up the issue of insecurity in public spaces that imposes serious limitations to youth citizenship building and human development. This problem was amply addressed in the National Human Development Report (NHDR), Honduras 2006, and therefore it is worth revising the latter.

A young university student in one of the Focus Groups stated the following:

"...I was in my last class in the public university, from eight to nine. The professor would say 'eight forty' since all the students asked him to finish the class at that hour because it was very difficult to catch a bus after that hour and bus drivers always tell you that their last run is at eight forty because they are afraid of being robbed,

even we students are afraid of being assaulted on a bus. For example, you catch a bus or taxi that drops you off downtown but if you live in Cerro Grande (suburb on the outskirts of town) then you have to walk to the city center and around 9 pm hope you catch another bus to where you're going.. And people who work can only take two classes, they cannot enroll too late. Once I saw some kids in secondary school uniforms, from the Milla Selva Institute, that were being held up on the bus, the buses that go the Kennedy division, they're always full and the thieves take advantage of the bus being so crowded and they pick your pocket or steal your purse or wallet or whatever they can, and you don't even feel it..." (UNDP, 2006 NHDR, p. 137).

On this same topic, another youth mentions the following:

"Another thing is that when we go out, it's better to go with a group of friends so you're not scared that the criminals will do something to you. There is fear because everyone is afraid of everyone else. Sometimes I'm walking behind a girl and then she suddenly turns the corner because she feels she's being followed by a thief". (Focus Group, 2008/2009 NHDR).

In summary, the daily violence and insecurity in public spaces provokes fear in young Hondurans and other citizens and keeps them enclosed in their private spaces, restraining their opportunities for human development, for citizenship building and their agency. From this mindset, it is vital to design initiatives which foster the recovery of public spaces.

Young Hondurans who participated in focus groups emphasized the State's responsibility to generate employment and economic opportunities for young Hondurans. Some of them are of the opinion that lack of employment and economic opportunities are a key factor for understanding youth violence:

"more than anything, what we need is opportunities and to create strategies where young Hondurans can become involved or to give them more priority". "Create more employment because we know we live in an underdeveloped country. Then what are people to do? They look for a way to survive, to subsist on this land, and then what they do is look for the really bad jobs". (Focus Group, NHDR, 2008/2009).

Table 11

Graph 13

Responsible for the violence and for its increase in Honduras, according to young Hondurans

Source: Based on data from ENPDH 2008.

Programs for alcohol and drug prevention, and the promotion of cultural activities in public spaces were the things visualized by young Hondurans as basic prevention actions for reducing violence (see Graph 14).

6. In spite of advances in its human development levels seen in Honduras; there are

Young people enjoy a vital moratorium that makes them feel full of energy and vitality and experience a sense of invulnerability since they assume that death is something distant. However, the youth involved in high risk activities ("maras" and gangs, drug-trafficking and consumption, etc.) may find itself with its vital moratorium abruptly cut short.

Youth are generators and recipients of violence. The dominant image of the first group is of juvenile gang members. The dominant image of the latter is of young people who are subjects of extrajudicial killings or violent murders.

The press has given much attention to the images of the youth involved in juvenile gangs with their faces and torso full of tattoos, presented as the main drivers of violence in Honduras. However, data from the Observatory of Violence do not reveal that young gang members youths are the main perpetrators of violence in the country. The careful review of the local periodic press during the year 2008, suggests that only 4% of homicides were related to issues of juvenile gangs.

The dominant image of youth as victim that has been prevailing in the collective

imagination, is one where young people are subject of extrajudicial executions or a violent murders. Casa Alianza has contributed to visualizing this concern. According to this international NGO's data, 4,430 children and young Hondurans under 23 years were killed violently between January 1998 and October 2008. 68% of these were in the age group from 18 to 23 years. There is no data to accurately estimate the social origin of young Hondurans killed or that of their murderers. The data from September and October 2008 does suggest some of the general characteristics of young people killed violently. 90% of the victims were men and the remaining 10% were women. 83% were between 18 and 22 years and 27% were under 18 years. 88% were killed by firearms and the remaining 12% by stab wounds and strangulation. Only 5% of the crimes were alleged to youth belonging to juvenile gangs. Slightly more than two-thirds of the violent deaths of youths occurred in the department of Cortes (37%) and Francisco Morazán (32%), two of the most urbanized departments in the country.

Source: Based on UNDP-UNAH (2008) *Observatorio de la Violencia*. Boletín No. 13, p.15; Casa Alianza (2008), *Análisis sobre ejecuciones y/o muertes violentas de niños/as y jóvenes en Honduras*, Tegucigalpa, p.23

still territorial inequalities and disparities between the potentiality and empowerment of men compared to women. Even in this context, young Hondurans have achieved more education than the generation that preceded them, they are more prone and flexible to adapting to new technologies and it seems to be a generation with a lesser degree of inequality at territorial level as well as in gender.

6.1 Honduras shows important advances in human development. Nevertheless, it continues to be one of the countries with the least number of achievements in this field at the Latin American as well as the Central American level.

Examining the figures of the Human Development Index (HDI) since the year 2000, all countries in the region have shown positive improvements and have kept a growth trend until 2006, although at a different pace. With the available data, comparisons of the progress in human

development from 2000 to 2006 have been made between Latin American and Caribbean countries on one hand, and countries from the rest of the world with a medium level of human development, like Honduras, on the other hand. The percentage of reduction in human development gaps was used for the purpose of comparison.¹

In classifications according to the reduction of gaps, Honduras ranks in the 10th position of the 19 Latin American and Caribbean countries and ranks 23rd of the 60 countries with medium human development around the world. Chile is the country that advanced the most in Latin American, while in Central America it was El Salvador. This illustrates that the progress made in Honduras in terms of human development seems to have been slow but cannot be underrated given that there is a good number of countries in the world with lower growth rates and some even with set backs in human development.

Public investments have been made in different sectors, like social protection, education and culture, water and sanitation, health and others during the last few years contributing to the increase in different human development indicators in the country. According to the estimates based on data from the United Nations Population Division and National Statistics Institute of Honduras, between 2001 and 2007 the average life expectancy in Honduras increased by 1.6 years. During the same period, the adult literacy rate (population 15 years and older) has increased by 2.5 percentage points. The gross combined attendance in formal education centers in its three levels increased considerably by 10.2 percentage points (see Table 12).

On the other hand, the dimension in which Hondurans made the least progress continues to be income. The country's economic growth, especially between 2004 and 2007 (above 6%) has not translated into a substantial improvement of income for the Hondurans. By 2006, based on World Bank estimates, the Honduran GNP per capita represented only 39.3% of the GNP per capita for Latin America and the Caribbean, measured in purchasing power parity US\$. This situation is made worse when confirming that the income dimension is the one where the greatest inequalities are found and have grown through time. According to ECLAC estimates (ECLAC, 2009 p.79), the national Gini coefficient for 1999 was 0.564 and increased to 0.580 by 2007, making Honduras one of the most unequal countries in Latin America.

In spite of the relative progress, the position occupied by Honduras for the last few years in terms of human development is not a flattering one, neither at a global nor regional level. Honduras currently ranks 117 of the 179 countries in the world. Among the 32 countries of Latin America and the Caribbean, Honduras ranks 29th, outranking only Nicaragua, Guatemala and Haiti (see Graph 15). This only indicates that the efforts made until now have not been enough and need to be redoubled by the State and the different sectors of society so that the Honduran population can enjoy a worthy life with opportunities.

6.1 The gap in the access to some of the basic opportunities for development and empowerment between men and women has not been closed.

In the dimension of knowledge, women present greater potential than men because they are accessing to a greater extent to formal education and this leads them to participate more in the professional and technical fields. They are, however, excluded from political participation opportunities, access to decision making positions in the economic field and to generate higher income levels.

The analysis on the Gender-related Development Index (GDI) between 2001 and 2007 allows reaching the conclusion that women have achieved, and even slightly surpassed men, in the social dimensions of human development. For example, in 2007 it was estimated that the life expectancy for women was 73.9 years while for men it was estimated at 66.9 years. Moreover, the literacy rate for women and men was almost equal (82.5% and 82.6%, respectively) and the gross combined attendance rate in the three education levels among women was 64.0%, and slightly lower for men at 62.6%. On the other hand, the achievement of women in the income dimension is still very far from men's income. In 2001, the per

capita income for women was, on average, 36% of what men were earning, increasing slightly in 2007 reaching 38%.

Observing Graph 16, it is evident that the gender differences in empowerment are even more noticeable than shown by the GDI indicators. What's more concerning is that they tend to persist throughout these last few years. The biggest differences exist in the participation in political decision making where the constraints for women are evident and in opting for public office elections. In the last two election processes (2001, 2005), women were only able to win 20% of the total of public positions in municipalities. In 2005, only 24 women were elected as presidents of municipalities, representing only 8% of the total number of mayors. As for the number of women occupying seats in the National Congress, in the last elections of 2005, 31 seats of the 128 were won by women, representing 24% of the total (United Nations System, 2007a, p.41).

Table 12

Trends of the Human Development Index and its Indicators

Concept	2001	2002	2003	2004	2005	2006	2007
Human development index	0.672	0.679	0.681	0.689	0.697	0.705	0.709
Life Expectancy at birth (years)	68.9	69.1	69.4	69.6	69.8	70.1	70.5
Adult illiteracy rate (%)	80.0%	79.9%	80.1%	80.9%	81.7%	82.4%	82.5%
Gross enrollment rate for primary, secondary and tertiary education (%)	53.1%	57.9%	57.2%	59.4%	61.6%	63.8%	63.3%
Estimated per capita income (US\$ PPP)	3,092	3,145	3,225	3,360	3,494	3,648	3,810

Graph 15

HDI classification and its distribution by dimension

Selected countries, 2006

Source: Self-Based on UNDP, 2008.

As for the dimension of participation in economic decision making, it was observed that from 2002 until 2005 the number of professional and technical women was slightly higher than men, although in the last few years this slight difference has tended to disappear. This appears a logical consequence if we consider that women, especially younger females, have been improving their education levels, even surpassing men in this field. Despite that women have increased their participation in the professional arena; problems emerge when they aspire to management or control positions in the work place. This is where the inequality and limitations that women must face are the strongest.

In assessing these indicators through time, there is no evidence of their convergence to reducing the gender differences, and therefore the value of the Gender Empowerment Measure (GEM) reflects this plateau with a value of 0.518 in 2002 and 0.513 in 2005. As from 2006, there is a slight increase in the measure (0.557) due mainly to the elections at the end of 2005 with a slight increase in the number of women elected

to office in municipalities, maintaining almost the same in 2007.

Finally, the exclusion of women to access political and economic participation opportunities limits their potential to contribute not only to the wellbeing of their own families but also in the consecution of an enhanced human development in the country.

6.2 A significant proportion of the population continues living in precarious conditions of human poverty deprived of acquiring the minimum capabilities that allow them to qualify for a decent life.

Poverty, from a human development mindset, is mainly based on the perspective of capacity. In accordance to this, the attention is focused on things that a person can be, or do, according to the opportunities that are available. Using the capacity perspective, a more reduced group of persons would be considered as poor due to being absolutely deprived of their minimum capacities.

At the national level, the Human Poverty Index

(HPI) was 16.0% in 2001 and 13.5% in 2006. This can be interpreted by stating that the group of population deprived of the basic dimensions of human development was reduced by only 2.5 percentage points. The situation is aggravated in some municipalities, where it is estimated that this population exceeded 30% in 2006 (see Map 1).

Specifically, the HPI indicators for 2006 reflect that, at the national level, the probability of not surviving to the age of 40 was 9.4%, the illiteracy rate in people 15 years and older was 17.6%, the percentage of underweight children under the age of 5, according to the WHO standards, was 8.3% and the population without access to improved water sources was 12.8%.

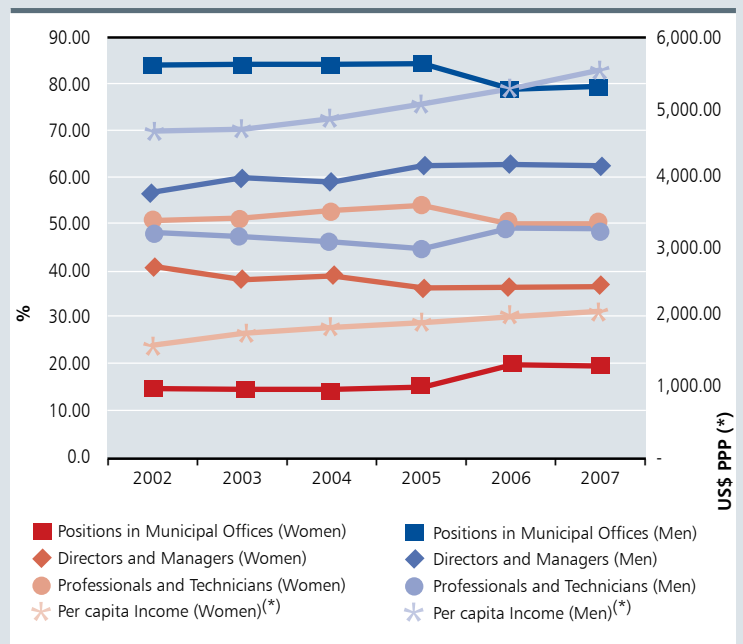

When comparing the expenditure aimed at overcoming poverty and the results obtained, it can be followed that the orientation of resources might not have been that efficient. A progress report of the PRS prepared by the Presidency's Policy Analysis Unit (UNAT, Spanish acronym) in 2007 reports that a 39% of the PRS expenditure was directed to funding salaries and wages, specifically for teachers and physicians in the public system; 45% of this expense was directed to transfers to current and capital accounts and 10.1% was dedicated to the procurement of goods and services, while only 6.3% was used to support investment projects to improve the population's socioeconomic conditions (UNAT, 2007, p. 15). It is therefore necessary to make the poverty expenditure more efficient so that the population can have the opportunity to acquire the capacities that will allow them to be self-sufficient and productive.

6.3 Once again it is proven that there are great inequalities in human development and human poverty levels in the country's different departments and municipalities. Concerning is the lack of signs that progress is being made toward territorial equality.

The disaggregation of the HDI by municipalities allows the analysis of territorial inequalities in Honduras. The minority of municipalities falls into the medium-high human development categories. The majority of these municipalities are located in the central and northern-Atlantic regions, and a smaller number in the south. As expected, the majority of these municipalities are located in the northern-central-southern development corridor that includes the two largest urban centers in the country: Tegucigalpa and San

Graph 16

Trends of the GEIs (2002-2007)

Source: Based on estimates of the Human Development Index for Honduras.

Pedro Sula. On the other hand, the western part of the country concentrates the largest number of municipalities with the country's lowest levels in human development.

According to the 2007 estimates, a total of 39 municipalities (13.1% of the total) fall into the medium-high human development category (0.700–0.800); 212 municipalities –the great majority– (71.1%), fall into the mid-medium human development category (0.600–0.700); and 47 municipalities (15.8% of the total), are in the medium-low category (0.500–0.600).

In terms of human poverty, three areas of the country can be distinguished as having the highest percentages of human poverty. The first and largest is the western region, the central south is second and the last is the eastern area that includes municipalities in Olancho and Gracias a Dios (see Map 1).

For 2006 it was estimated that the municipalities least affected by human poverty are a minority, in other words, there are 13 municipalities (4.4% of the total) whose HPI is less than 10%. Then there are 165 municipalities, the majority (55.4%), with an HPI between 10% and 20%. Another 100 municipalities (33.6% of the total), have a human poverty rate of between 20% and 30% and there are another 20 municipalities

Source: Based on estimates of the Human Development Index for Honduras.

(6.7% of the total) that present a HPI greater than 30%.

Additionally, the convergence analysis shows that there were several municipalities with a low human development rate in 2001 and they did not advance very much between 2001 and 2007, while many municipalities achieved considerable progress starting from higher human development levels. The same convergence analysis was applied to the municipal per capita income, illustrating that a considerable number of municipalities that had a low per capita income in 2001 also presented the lowest income growth level during this period. This obviously will not lead the country toward the consecution of a lower inequality level in time.

The latter is reinforced by the Gini coefficient estimates made by ECLAC, mentioned above, according to which the 1999 rate of 0.564 reached 0.580 in 2007. This makes evident that the inequality situation in the country has been deteriorating during this period, especially in the rural area where the Gini coefficient increased from 0.512 to 0.571 during the same period. The deep structural patterns of inequality must be broken in order to potentiate the human development of the whole population in all regions of Honduras.

6.4 Young Hondurans are a promising generation with the potential to become strategic agents of

development because, in contrast with the adult generation, this new generation has reached higher education levels, is more prone and flexible to adapting to new technologies, and it seems to be a generation with lesser degrees of inequality at the territorial and the gender levels.

According to the Multi-purpose Permanent Household Survey (EPHPM) in 2008 (INE, 2008) there are 2,976,918 young Hondurans between the ages of 12 and 30 years, representing 38.7% of the population. The Honduran population is currently undergoing a demographic transition period known as the demographic dividend in which the dependency relationship of labor inactive persons (children and senior citizens) per each person in working age is reaching historical lows. It has been estimated that this period of demographic bonanza will finalize in 2050 and that it is a window of opportunity to potentiate citizenship and human development of youth.

Several human development indicators for young Hondurans and adults have been estimated with the purpose of having an overview of the human development status of Young Hondurans and for realizing comparisons. By 2008, 92.84% of young Hondurans could read, compared to only 75.11% of the adults. The urban-rural gap in literacy among young Hondurans is practically one third of the gap for adults. On the other hand,

the pattern of gender gaps is inverted in these two groups, since among adults a larger percentage of men are literate (75.9% of the men versus 74.5% of the women, in 2008), while among young Hondurans, women surpass men (94.0% and 91.6%, respectively).

With time, the new generations also acquire a higher formal education level. In 2001, 24.1% of young Hondurans already had the years of schooling appropriate for their age groups, 10.3 percentage points more than adults. By 2008, this difference between young Hondurans and adults had increased by 16.1 percentage points. Another gap in the knowledge area was also explored, the access to information technologies. According to data in the 2008 EPHPM, 16.1% of young Hondurans between 12 and 30 years had accessed internet in the three months prior to the survey, while in the adult group it was only 6.2% during the same period. This shows that in Honduras, as well as in other countries around the world, young Hondurans are adapting to technologies better than adults.

As for the income variable, the differences between youth and adult medium monthly wage income were examined. According to the data, on average young Hondurans earn 67.6% of what adults earn in their positions, which is to be expected due to the value placed on experience in the labor market. A positive note is that the difference has tended to diminish in time and by 2008 young Hondurans were earning an average of 71.5% of an adult's average income.

In the territorial comparison, it was observed that the employment income differential between urban and rural areas in 2008 was significantly lower in young Hondurans than in adults (the rural average income for young Hondurans was 52.6% of the average income in urban areas while the adults earn 42.0% of urban average). As for gender differences, in the adult group women received 78.8% of men's income in 2008, while in the youth group, women had a higher average income than men. This is further evidence that the inequalities in young Hondurans are lower and that in terms of income, the educational achievements of women which have reached and even surpassed men, are yielding some results.

Young Hondurans consider themselves important citizens and they are in search of an active citizenship building that will contribute to boost the development of Honduras. This was manifested by several participants in the Focus Groups, among which a young garífuna woman,

a student under the age of 18 expressed: "...we as young people play an important role in the development of Honduras. We are not the future, we are the present and the country will depend a great deal on the activities we carry out."

It is necessary for the country to bet on this generation and, through State public policies, give its youth more opportunities to access decision making positions and economic resources in accordance to their capacities. For young Hondurans, this translates into empowerment, expansion of opportunities, exercising of their capacities and of their citizenship to become strategic role agents and promoters of human development in Honduras.

7. Guidelines for policies, programs and projects for a youth action plan.

The 2008/2009 NHDR recognizes the existence of a National Youth Policy (2007-2030) approved by the Social Cabinet, waiting to be ratified by the Council of Ministers and the President of the Republic to become a policy of the Honduran State.

The policy will now require an instrument allowing it to prioritize and articulate strategic actions that support its organized and systematic implementation. This instrument is an Action Plan.

The 2008/2009 NHDR intends to contribute to the elaboration of this Action Plan by proposing guidelines for policies, programs and projects for its realization in the issues it addresses. Therefore an Action Plan for youth social inclusion, citizenship building and human development is proposed.

The Action Plan's strategic axes have been extracted from the National Youth Policy (2007-2030) and are: (1) empowerment and inclusion through citizen participation; (2) universal access to the knowledge society, digital inclusion and multilingual communication; (3) universal access to economic rights through decent employment and rural development; (4) universal access to sexual and reproductive health, and, (5) universal access to social protection from violence toward youth. The following are proposed as guiding principles for this Action Plan: 1) Intersectoriality; 2) Transversality; 3). Generational, gender, ethnic and socioeconomic equity; 4) Strengthening the Local Action; 5) citizen participation; 6) policies for youth and from youth, and, 7) Involvement of all institutions and all population sectors, not just youth.

The Action Plan for social inclusion, citizenship building and human development will incorporate all policies, programs and projects of the National Youth Policy in the pertinent strategic guidelines. The following are used as examples:

- Organize Youth Offices and Municipal Youth Commissions
- Self-managed and sustainable local youth programs.
- Promote youth participation in the management of State projects, and in State and civil society institutions working with young Hondurans.
- Promote the universal access to the secondary level education.
- Strengthen and expand distance education programs in rural areas, stressing technical careers
- Promote schooling that is open to extracurricular activities of young Hondurans.
- Scholarships for extremely poor youths for their technical vocational training.
- Program to improve the quality of university education.
- Promote Multilingual Computer and Education Centers in all rural and urban schools.
- Promote radio and television programs produced by young Hondurans and that address technological education, computer technology and multilingual communication.
- Generate eco-tourism ventures in rural areas with young Hondurans of indigenous and Afro-Honduran.
- Training in vocational workshops for the creation of productive opportunities.
- Promote hiring young Hondurans to integrate Municipal Technical Units.
- Strengthen young Hondurans self-support groups addressing sexual and reproductive health and HIV & AIDS prevention.
- Guarantee Access to a medication fund for persons living with AIDS.
- Train young Hondurans to perform as facilitators for sexual and reproductive health education and HIV & AIDS prevention.
- Implement the Open Schools Program for young Hondurans during the weekends.
- Prepare municipal projects for violence prevention using the municipal budget.

The 2008/2009 NHDR proposes a set of policy, program and project guidelines that have been the output of the situational analysis of youth

and of the study and considerations of successful experiences in other countries that are convenient to adopt and adapt with the purpose of enriching these proposals and setting the foundation for preparing the Action Plan for Inclusion, Citizenship Building and Human Development. These are:

8. Education: guidelines for policies, programs and projects.

8.1 A Substantial expansion of third cycle (ninth grade) coverage in basic education (lower middle education) and the diversified cycle (higher middle education) through conventional and non-conventional means in the framework of norms that declare the compulsory nature of the secondary level education.

Achieving this objective requires the testing of flexible secondary education options that are part of a joint effort of the different sectors of the Honduran society. One good example of this type of initiative is the Tutorial Learning System (SAT, Spanish acronym) the Distance Education System (SEMED, Spanish acronym) and the Honduran Institute for Radio Education (IHER, Spanish acronym) that should be supported and massified, or experiences elsewhere such as the Secondary School for All in Chile and the Rural Alternation Centers for Technical Formation from Peru, that could be replicated initially as pilot experiences and later massified. Education policies alone will not solve the problems generated by social exclusion. In addition to having a general approach, they should be accompanied by measures directed toward improving equity and a series of focalized measures, applying the principle of providing more for those with less in a situation of resource scarcity.

8.2 Increase the supply of training and technical and vocational education, through formal and informal public and private initiatives.

The creation of nonconventional programs that incorporate owners of workshops, restaurants and other private initiatives should be explored through public policies that encourage this segment of actors to incorporate into the supply of duly accredited training services.

8.3 Update higher education to fit the requirements of the information and knowledge society.

Higher education in Honduras should adjust

to the paradigm shift that this education level is undergoing throughout the world, and in particular Latin America which looks to turn universities into communities of people dedicated to critical and reflective thinking, and scientific and technological research. The culture of teaching should be substituted by the culture of learning; a culture that endows the students with the basic competencies for an autonomous learning and for learning throughout their entire lives, which strengthens the cooperative work and joint research among the students and then between students and teachers. In the framework of ethical and civic responsibility, the students and professors should collaborate in research and service activities for the community. In this regard, a university outreach model should be designed that allows the research institutes and students to engage in the matters of the communities to which they are assigned and contribute to solving the problems faced by these communities.

8.4 Make curricular modifications that allow the introduction of an education for citizenship and democracy.

The education for citizenship and the practice of democracy should be crosscutting and eminently practical, based on the idea of learning by doing and engaging in the collective life and matters of the community to which one belongs.

8.5 Address the suggestion on educational policies made by young Hondurans, regarding the introduction of a significant and sustained improvement in education in the next ten years.

When asked about this particular issue, young Hondurans that participated in the ENPDH 2008 pointed to the following priorities: i) the need of an educational leadership through a high level body that can make education policy decisions and guarantee that these policies will be monitored. This entity will be comprised by representatives of the State, civil society, parents and students; ii) scholarships for outstanding students and affirmative action measures for students from low income families; iii) long term education policies, and, iv) increase the education budget with the condition that the increase will not be allocated to teacher salaries and wages

9. Employment: guidelines for policies, programs and projects.

Box 2

We have to give priority to education in rural areas

"If I was the Minister of Education, I would restructure the entire education system, starting by locating the schools with most problems especially in the rural area which are often forgotten. There we can find many people who have the desire and willingness to study. We here in the city have so many opportunities that we sometimes throw away. We don't take advantage of what we have." **Young. Focus Group, Tegucigalpa.**

Source: Focus Groups, Honduras NHDR, 2008/2009.

9.1 Promote an equitable and sustainable economic development higher than 5%, through an increase in the national and foreign private investment and increase productivity of the production factors, capable of generating decent employment for Young Hondurans.

It is necessary to increase the productivity of the economic sectors, especially the agricultural sector which is labor intensive, and to boost the skills of employees and quality of the job positions. Productive chains among the different sectors should also be developed with the purpose of increasing the supply of job positions and to drive an inclusive economic growth.

The proposed measures include the following:

- a. Increase the production and productivity of traditional and non-traditional agricultural products.
- b. Replicate the productive initiatives of technology transfer and the development of markets such as the ones included in the Millennium Challenge Corporation.
- c. Generate employment for young Hondurans by promoting micro enterprise activities and their synergy with the medium and large enterprises, in order to reduce the precariousness of youth labor and raise productivity in the country.
- d. Comprise a package of local development projects using international aid resources, with the respective national partner.
- e. Promote the integration of productive policies with labor and educational policies in order to improve the productivity of the more dynamic micro, small and medium enterprises.
- f. In the annual or pluri-annual public investment

Secondary Education in the Rural Area: the Alternation Education Centers in Peru

In rural areas, young people lack opportunities to develop skills and opportunities to select the type of life they have reasons to value. They also face the problem of limited relevance of the academic curricula to the environment in which they unfold and develop. These and other factors linked to poverty and the relative isolation of the communities where they live are at the bottom of the backwardness the rural youths have identified.

This order of things must be reverted and rural secondary education must become a priority of the State, private sector, parents and civil society as a whole. The use of non conventional or alternative secondary education for the rural area represents a good option for skills development and to provide opportunities for rural youth. The Alternation Education Centers from Peru (CRFAs - Spanish acronym) are a good option for rural youth wanting to access a secondary education. A CRFA is an association or partnership of families, institutions and persons that gather together to promote sustainable rural development through training youths and their families. The first three CRFAs began functioning in Peru in 2002, boosted by the ProRural Association. In 2003, an agreement was signed between the ProRural Civil As-

sociations and Aldeas Qullan, with the legal basis established by the Ministry of Education and funded by the State in order to expand the CRFAs. The CRFA is managed by an association of farming families and from other sectors of the rural setting who are responsible for managing the Center and orienting the surveillance of the education process. The CRFA activities are developed by a team of educators from various backgrounds known as "monitors" who are familiar with the rural reality and are trained on specific Alternation Pedagogic areas of pedagogic expertise which imply back and forth theory and practice. These are professionals prepared to work as a team and to accompany the students in their formation. Starting in the first year, the students develop productive projects that promote the development of entrepreneurial skills and autonomy.

The CFRAs are sustained with funding from the families, agreements with the Ministry of Education and other State entities, from the municipalities, local institutions and contributions from individuals. The benefits are targeted toward the children of small and medium scale farmers; the last five years and are officially recognized.

Source: *Los Centros Rurales de Formación en Alternancia*. Available at <http://alternanciaperu.blogspot.com/2006/10/los-centros-rurales-de-formacin-en.html> El Sistema de Alternancia en el Perú. Economic Meeting Piura-BCR-Piura Region 19 and 20 may 2008.

programming, review and identify the different public programs, projects and initiatives that have specific youth components and socialize these with the public and private institutions and youth organizations. An inventory of the initiatives will strengthen the institutional capacities and resource programming.

9.2 Develop flexible education programs that allow the inclusion of young Hondurans that are neither in school nor working.

Establish education initiatives aimed at creating flexible hours and temporary status in order to give young Hondurans the opportunity to combine their productive activities with their studies. Affirmative action measures should be practiced to allow young Hondurans that neither study nor work to combine both activities in a learning process.

9.3 Promote corporate social responsibility to favor the capacity building and training for entrepreneurship towards the country's youth.

- Identify entrepreneurial good practices which are generating successful results in terms of productivity and cost effectiveness, and that can be replicated among young entrepreneurs.
- Prepare a strategy directed to implementing capacity building programs and projects in the private sector to achieve a better labor insertion of young Hondurans. The actions will be directed to improving the capacities of young Hondurans so that they can increase the productivity of the Micro, Small and Medium Enterprises (MIPYMEs, Spanish acronym), through Government and private endeavors in training and capacity building, using the ongoing (My First Job, PROEMPLEO, Spanish acronym) and future initiatives.

9.4 Promote programs and projects to support young entrepreneurs in order to have a greater access to economic assets to boost the generation of decent employment and improve the county's productivity.

Motivate and support young entrepreneurs in the development of new or current productive initiatives or service, is a pertinent measure for their insertion into decent employment or to generate more employment. To achieve this, Young Hondurans need to overcome the constraints in their access to economic assets, so that they can embark in their own projects. Support must be provided to young entrepreneurs in the execution of the different stages of the implementation of their initiatives through technical and financial assistance, especially during pre-investment and investment. This is complemented with knowledge on other related activities such as training, marketing and merchandising techniques, assistance for the identification of new market niches or other aspects that contribute to improving their living conditions (see Graph 17).

10. Migration: guidelines for policies, programs and projects.

10.1 Have a migration policy that provides the appropriate spaces for the National Policy for Assisting the Migrant Returnee, particularly for young Hondurans, with the objective of achieving a better inclusion in income generating activities,

Graph 17

Elements identified by youths as important to start or to continue operating their own business

Source: Based on data from ENPDH 2008.

enhance their social conditions and heighten their citizen participation to motivate them to remain in the country.

The following is needed for this purpose:

- a. Provide technical support for the Immigration General Management Office and the CAM-R in order to improve its institutional capacities to validate, socialize and implement the National Policy for Assisting the Migrant Returnee (PNAE, Spanish acronym). The support should also be provided to the formulation of proposals to reform the Law of Migration and Immigration, aimed at benefiting the deported immigrant and to favor her reinsertion into the country's economy.
- b. Provide support for young Honduran returnees so they can apply the skills acquired during their migratory period in their own business endeavors. This can be accomplished through their insertion into formally constituted businesses or in enterprises of their own. It is important that by applying the concept of corporate responsibility, the private sector can incorporate into the support of this initiative.

10.2 Take advantage of the trade and investment openness that the country has with its main partners to create opportunities and conditions that benefit young Hondurans in their labor insertion.

The objective of this initiative is to identify the RD-CAFTA sectors that young Hondurans can be inserted in to improve their life circumstances and create conditions for citizenship building and human development.

10.3 Promote a more productive use of remittances and turn them into a source of development for the areas of destination, and to achieve a better labor insertion of youth.

The purpose of the initiative is to achieve a better use of the remittances received from abroad, and the expectation is that these remittances will become an important resource of socioeconomic development for the areas of destination and for the social and economic benefit of the recipient families. It is expected that this type of initiatives will be supported by actions from the State and private sector, to stimulate the investments made and incentivize employment generation in the area or region, and which will heighten the economic and social wellbeing of the migrants' communities of origin.

11. Youth Citizen Participation: guidelines for policies, programs and projects.

The promotion of citizen participation must be an essential component in youth policies, and in this regard youth policies must have at least four fundamental operational criteria:

The program *High school for all* (Liceo para todos in Spanish) of Chile, was established in the year 2000 with the goal of improving the quality of the high schools young Chileans, from poor households and at educational risk. The program has three main components: a) scholarships for students at risk of dropping out of school; b) strategies to improve ways of organizing teaching; and c) support for the initiatives and plans for each school to reduce dropouts and improve opportunities for learning. The program promotes an intervention strategy that develops from high school and simultaneously addresses two complementary dimensions: developing educational and psychosocial development. Both lines are in a Plan of Action. What characterizes the student population who attend these educational establishments is the low education of parents and the type of occupation of the household head is generally weak and unstable. Students are selected for their poor performance, simplicity, low attendance and low achievement. They receive a scholarship of \$ 200 per annum. An evaluation of this experience pointed to the existence of three difficulties: 1) Teachers and principals of secondary schools associated with the grant award and present a resistance to select students with poor school performance, 2) The amount of grants is insufficient to achieve an impact important in reducing the rate of withdrawal, and 3) If the scholarship is not accompanied by strategies to support difficulties encountered by students, the impact on retention of low-income youth is minimized.

Source: María Teresa Marshall Infante, *Programas de mejoramiento de las oportunidades*. El Liceo para Todos en Chile, International Institute for Educational Planning of UNESCO, Paris, April, 2004 and Catalina Ruiz U., *Sistematización de la política chilena: Programa Liceo para Todos y su línea Planes de Acción*, Santiago, June, 2005.

- a. Invest in strengthening the self-esteem of each youth in order to have a firm foundation for the social construction of autonomous agents with the full development of their capacities. This is a task that must be performed in school, the family, community and in many other related spaces. It must be supported by mass media and by institutions such as the political parties, National Congress, the Justice System, etc.
- b. Strengthen the education for citizen participation and democratic practice in the formal as well as non formal education system and in the areas of the household, the community, political parties, etc. Tools and methodologies must be developed to strengthen pluralism, the negotiated solution to differences and peaceful conflict resolution.
- c. Take a qualitative leap promoting the integration of young Hondurans into the spaces of citizen participation such as participatory

budgets, social control of public policies and others. In any case, this is about going beyond the creation of “specific spaces for youth’s participation” (youth councils, youth homes, etc.). Yet, the participation of young Hondurans in broader spaces can contribute to developing assertive and responsible attitudes of young Hondurans in relation to their surroundings.

- d. Strengthen the organization and communication capacities of young Hondurans (the youth movement themselves), promoting the development of effective democratic practices. It is also necessary to develop their capabilities for interacting with decision makers, to become involved in the main dynamics of the public agenda and the consolidation of a positive image of young Hondurans in the public opinion as a whole. This implies building bridges of understanding with mass media.

For all of this to be a possibility, the following needs to be addressed: i) the area of youth legislation (strengthening the practice of rights and responsibilities); ii) develop and consolidate youth networks in all fields in which they can make effective contributions to the process of change (for example, to promote the gathering of large youth’s groups) and, iii) legitimize the youths movements as valid representatives of young Hondurans at all levels (supporting their existence and their development).

The effort of young Hondurans themselves is needed but it also requires the support of the adult decision making structures so that the processes and initiatives to develop can reach their objective. In this context, working with the adults is as important as working with youth.

The experience in youth citizenship involvement accumulated in Honduras is limited but relevant. We must bring to mind the broad group of young Hondurans (both genders and from all social settings) that had an obvious prominence in rebuilding the country after the devastation caused by Hurricane Mitch, demonstrating that with causes which are attractive to them, the new generations will actively engage.

It is also important to highlight the long tradition of young Honduran movements (that go from student movements to others linked to the different churches and other more informal or related to diverse cultural expressions), to the constitution of very active movements in recent times, such is the case of the National Youth Forum, the main driver of several relevant legislative initiatives like

the Framework Law for the Integral Development of Youth, approved in 2005.

It is necessary to keep in mind the existence of important initiatives in the public policy sphere (Poverty Reduction Strategy (PRS), for example) which success depends greatly on the active participation of the population in general and youth in particular, as volunteers for development for example. A dynamic coordination between the PRS and a National Volunteer Program at the service of the fight against poverty, could achieve extremely relevant impacts in the fight against this obvious social problem as well as in setting in motion the frontline participation of new generations in development.

It is also pertinent to recognize the existence of an incipient public institution for youth that has been under construction since the creation of the National Youth Institute (INJ, Spanish acronym), and that must be complemented with institutional instances that ensure the existence of effective articulations among the different Ministries and the different municipalities, assuring the effective and necessary participation of civil society. An effective and well articulated institutional system will greatly empower the youth's citizen participation in boosting the country's human development.

Once the specific characteristics that a youth policy should contain have been enumerated, it is important to stress the need of reaching a political agreement for democratic quality so as to transmit the interest of all representatives of society to improve the system's quality. This will also facilitate the subsequent implementation of the necessary instruments, such as policies to encourage participation.

The following are some of the program actions that the public sector could adopt to encourage youth citizen participation and confront the social exclusion of youth in the country, and at the same time, supporting the building of Honduran youth citizenship:

11.1 Information-training programs on citizen participation through associability.

The program's general objectives would be: (i) increase the information and channels for its dissemination in the different associations in the country; (ii) have a solid knowledge of the reality of local associability; (iii) create and/or optimize the good performance of a Municipal Registry of Associations; (iv) individually address the demand for information from the different associations;

(v) increase the current participation of young Honduran in the existing associations; (vi) implement a system to permanently know the opinion of young Honduran and to consult and reveal municipal issues and the participation activities that occur in the region; (vii) generate prominent public spaces in the smaller sectors that will be negotiated directly by the associations; (viii) generate self-information projects in the associations; (ix) create a stable framework for inter-association training and communication; (x) start a process of permanent debate on the role of the associations in the life of a city.

The training plan should be a fundamental part of the citizen participation policy in the municipalities and should help to achieve an effective consolidation and real functioning of municipal entities. Training is a key element to improve the practice of associability and to be more effective in accomplishing its mission and give young Honduran's greater satisfaction in the entities. The plan wishes to obtain motivation strategies to increase youth participation.

It is not easy for the associations in general, and particularly for youth associations, to initiate a training process often because of economic limitations and not being fully aware of what its needs are, in addition to not knowing the existing supply of training. This is why it's necessary to initiate these information-training processes from the municipal level, although this does not mean that the municipalities are the sole projectors and developers of the plan. In any case, and in aiming for a high level of participation, the plan should result from a consensus between the representatives and youth.

The foundations for the training plan are: (i) consensus and participation; (ii) a permanent quest to improve the participation of youth to fulfill their right to participate as citizens; (iii) sufficient budget allocation; (iv) strong willingness to put it into practice; (v) a solid methodology; (vi) conduct a situational analysis of the starting point, with all the youth associations as a foundation for the Plan/Program design.

The Program's most important specific objectives will be: (i) increase the quality of the services provided to the citizens by the youth associations; (ii) endow the associations with the skills necessary to fulfill their mission with the due quality; (iii) enhance the motivation of the associations' members; (iv) awaken the desire for permanent learning and improvement; (v) establish an effective and voluntary communications channel; (vi)

internalize the networking and systems to promote teamwork, and internal participation within the associations; (vii) strengthen the relationships among the different collectives; (viii) learn about other management models.

11.2 E-Government: promoting the youths' acquired skills.

Another possible “integrated program” could focus on the growing and complex bond between young Honduran and the information and communications technologies that are challenging all levels of societies around the world. One of the most relevant fields in this bond is the one related to youth emancipation: “Decades ago, young people would emancipate through work, studies and marriage. Today, for many, the preferred venues are connectivity and consumption. These new mediums give youth its independence from its families, it articulates with these mediums and anticipate, all the way from their early adolescence, a horizon that is foreign from its parents” (Morduchowicz, 2008).

Along this same line of thought, the issue of the social integration of young Honduran could be explored, assuming that the media and the new technologies have generated new ways of integration, avoiding the simplistic assumption that these means promote or reinforce the social isolation. Some authors argue that, “the new forms of socializing through the new technologies promote the creation of virtual communities, and leisure activities are a new channel to obtain employment, obtain consumer goods, be with friends and relate to other youths” (Morduchowicz, 2008).

In any case, we are facing what several authors call “the multi-media generation”, not only because of the offer that young Honduran’s currently have, compared to any other previous generation, but above all because of the way they simultaneously use these new tools, difficult to understand (and accept) by the adults who are not familiar with them and who face serious difficulties in changing their mindsets in these domains. Undoubtedly, this is about an evident revolution that is putting broad and varied opportunities within reach of the new generations and that were never before effectively available, in the field of information as well as in the training and daily life in general.

The capabilities accumulated in young Honduran’s could be used proactively, integrating them as a protagonist into the development of the so-called “e-government”, arena in which the

region’s governments have invested important resources in terms of installing the necessary instruments (hardware and software), albeit they have not done so in developing the capabilities of the population intelligently and actively in the use of these instruments in which the new generations could collaborate very actively. A good point of reference is the Governmental Public Information website of the Dominican Republic, which is managed by youths.

At the same time, it is about an arena in which the social inequalities are very strongly expressed even if, very probably, with less strength than in other spaces. Hence, as argued by some authors, young Honduran’s belonging to low income families living in rural areas or in discriminated ethnic communities have less effective access to these new communication tools and make a less intelligent use of the same, reinforcing –to a certain extent– the existing social differences compared to their urban peers who come from middle and higher class families. At any rate, substantial progress that benefits all young Honduran’s in general is being made in these domains, although in diverse modalities and dimensions that cannot be ignored (Cristancho, Guerra & Ortega, 2008).

The public policies should operate prominently in these domains, facilitating the access of the disadvantaged. The experience in Uruguay with the Plan Ceibal (one computer per student and per teacher and free Internet connectivity) is achieving excellent impacts² and its replication in Honduras should be carefully studied keeping also in mind that the necessary investment is comparable to the resources that are being allocated in other alternative strategies (massive printing of textbooks, for example, that could be provided in electronic format). At the same time, work would have to be geared toward qualitative terms promoting the intelligent use of these tools (more searching for information, less entertainment, more educational usage, less consumerism) as a strategy for social inclusion, complementary to those that try to universalize the access in terms of coverage.

11.3 Youth volunteer program and poverty reduction.

If young Hondurans are to be understood as strategic agents of development, it becomes important to promote youth volunteers as the focal point of the country’s public youth policies and of the development strategies. Through its service as volunteers, a large scale youth participation

The Latin American University Volunteer Network for Social Inclusion (REDIVU) began in 2007, with the support of the International Congress on the subject conducted by the Universidad Inca Garcilaso de la Vega in Lima and the last Congress that was held in the Autonomous Universidad of Santo Domingo in December 2008. This was supported by the Trust Fund coordinated by the Spanish government and the United Nations Program for Human Development (Spain-UNDP Fund).

The Latin American University Volunteer Network aims to promote an institutionalized process of university volunteers or internship in the Latin American region, as a means to influence the public policies for social inclusion assumed by the different Countries in the region. One of its main aspirations is to influence the more than seven and a half million college and university students in most of the 800 universities that exist in Latin America, to develop at least one semester of community service under an innovative model of solidarity service and learning during their studies, as an additional component of the training period in their careers.

A process to exchange experiences between the different universities will be used for this purpose and human resources training and in-

ternational integration and cooperation will be developed, aimed at overcoming the life conditions that keep millions of Latin Americans in social exclusion and poverty. The Network considers the following activities as specific objectives:

- Create and develop a University Volunteer Observatory in Latin America that monitors information of the various programs, experiences and progress in the volunteer practices that contribute to improving the management quality and formulation and execution of effective and efficient public policies.
- Educate and train all stakeholders in the university field (administrators, students, teachers and technicians) working in volunteer programs.
- Facilitate the exchange of resources and implementation of specific projects in university volunteer programs with regional impact, in order to satisfy the common needs of socially excluded groups.
- With regional cooperation, carry out identification exercises and area proposals, programs, projects and activities.
- Encourage the creation of virtual spaces, communication and information channels aimed at the dissemination of the developed activi-

ties - of the best practices - of all university volunteers in the Network, such as a virtual volunteer forum.

- The prospecting, identification and channeling of financial sources and technical support for projects submitted by the different countries, which comply with the terms of feasibility, technical adequacy and consistency with the Network's objectives

In all, the Latin American Volunteer Network seeks to work together in strategic alliances with all stakeholders in the university environment, in favor of social inclusion based on the development of integral solidarity, voluntary, sustainable, transforming the social awareness and promoting the empowerment of citizens, active in their rights and obligations, beginning with the classic university social commitment.

All this with the mission of overcoming the root causes that generate social exclusion by promoting higher education with a deep sense of social responsibility that links professional education and research with community service, working for the integration and sustainable human development for Latin America.

Source: The authors gathered information from the Latin American Volunteer Network available on the Web (<http://www.redivu.org/>).

could have a strong presence in programs in the fight against poverty, literacy campaigns, building infrastructure, environmental protection, etc. Youth development volunteers could have several simultaneous effects with positive feedback, allowing young Hondurans to increase their daily experiences, helping them to mature and have a deeper knowledge of their respective surroundings—local and national—and make visible contributions to the development of their communities as well as to the country as a whole.

In addition to stimulating the consolidation instances of participation that have a duly valued meaning for youth. These initiatives allow them to face the existing stigmas which are centered on the widespread image of young Hondurans as a problem. The university extension programs could also be reviewed given that they currently function precariously in a framework where the students are made to perform irrelevant tasks fully unrelated to their curricula, and the students only try to meet their curricular obligations without placing an effective value on the experience.

Many of these programs are governed by bureaucratized modalities that do not satisfy any of

the stakeholders, but this practice can be reenergized by a renovated impulse of youth volunteering. It would be very interesting for the Youth Volunteer Program that exists in the country, if the UNAH were to actively incorporate into the recently created Latin American University Volunteer Network for Social Inclusion as a way to face the social exclusion in the country, which simultaneously favors the youths citizenship building (see box 5).

At the same time, the core of these issues is to fluidly and dynamically articulate the youth volunteers with the main public policies, prioritizing the fight against poverty, which continues to be the main problem, with the added grievance that the most affected sectors are the children and young Hondurans and that specific measures are not being taken for a more equitable distribution of the resources that are invested among the different population sectors.

Moreover, this is the area where more resources are being invested in social development (the Poverty Reduction Strategy is the clearest example of this). The evaluations made on these matters in the region are showing relevant progress (especially

Youth Advisors Program in the prevention of HIV/AIDS

The youth counselor program was initiated in the public schools of Mexico City and Oaxaca. Its objective was to adapt the AIDS training programs to transform youths into youth counselors, with specialized and objective information about HIV / AIDS. 550 youths received the program in Public Schools in Oaxaca, Quintana Roo, Tamaulipas and Michoacán. Of all the youths who received the program, 96 agreed to participate as youth counselors.

The youths selected as counselors gave talks to their peers with support from adult counselors and staff from the Mexican Institute of Family and Population Research (IMIFAP). Each counselor spoke to 36 youths. The program results confirmed that the promotion of sexual education and prevention of HIV / AIDS through peer groups is an information dissemination strategy that has positive implications on knowledge, attitudes, and sexual and contraceptive behavior.

The program contributed to opening channels of communication on the topic among peers. Youth Counselors is a suitable strategy for transmitting information and can extend coverage in a short time at a low cost.

Source: IMIFAP Youth advisors program in the prevention of AIDS. Available at <http://www.imifap.org.mx/espanol/resumes/resum>

in the conditional cash transfer programs, as the ones applied from the Red Solidaria or Solidarity Network) while at the same time illustrating important shortcomings, especially regarding the poverty rates which continue to be high and that could even escalate because of the international crisis that is restricting the volume of remittances, limits the exports and affects tax collection, which will have an increasing effect on public budgets.

Working from volunteer programs like the ones being proposed, young Hondurans could be the basis of a solution that is painstakingly sought. It's being attempted in Bolivia, for example, using the funds obtained from the debt forgiveness of a good portion of its foreign debt that is being directed to fighting poverty, invested through the municipalities, according to the structure of a widespread youth volunteer program. In the future, these topics will have a strong thrust and many institutions are becoming involved and therefore the "roles and functions will have to be differentiated in agreement" and based on solid strategic alliances.

The experiences in Latin America also show that youth volunteer service is not a simple entertainment mechanism that achieves only marginal impacts in the dynamics of our societies. This is

observed in the National Literacy Campaigns in Venezuela and Bolivia, with tens of thousands of "youth literacy volunteers" that has been at the heart of a collaboration that has helped hundreds of thousands of people to have basic literacy skills. Something similar happened twenty years ago in the National Literacy Campaign in Ecuador, which had the participation of 100.000 youths and somewhat different in Paraguay, where 85.000 youths were in charge of the most recent National Population and Housing Census.

Honduras has a Youth Volunteer Program that has been promoted by the Honduran Youth Program, under the Solidarity Network framework that still have stringent boundaries and low levels of effective articulation with larger public policies. This compels the design of strategies that allow its impacts to be widespread by participating actively in implementing the Poverty Reduction Strategy.

12. Youth in Social Risk: guidelines for policies, programs and projects.

12.1 Early Pregnancy

Have an Influence over the elements that increase early pregnancies, among them are the following:

- promote delay the initiation of sexual activity through campaigns in the mass media;
- motivate the spirit of individual responsibility or the use of protection devices in the first sexual encounter through the mass media;
- improve the sexual and reproductive health services and the adequate use of family planning methods, and,
- promote a longer spacing between pregnancies in youth, especially with those that are mothers.

Modify the socioeconomic and contextual elements of early pregnancies among them are the following:

- expand the delivery and quality of education, since it is one of the main tools to reduce the early pregnancies rates due to its capacity to improve women's self esteem and confidence in their own capabilities;
- expand the sources of knowledge and information for youth on sexual and reproductive health;

- promote changes in the attitude towards sexuality, counseling for youth and parents through the media, education and health institutions;
- promote sexual and reproductive health education in the formal and non formal education centers, and,
- promote the participation of men in educational activities on sexual and reproductive health, to create awareness on them and encourage responsible sexual behaviors.

Programs addressing reproductive health and for the reduction of early pregnancies, tend to be successful when they:

- involve young Hondurans in their design, and helps them develop skills for inter-personal communication and a sense of individual responsibility;
- they work jointly with parents and community leaders;
- offer role models worth imitating, and,
- have the sufficient amount of resources and duration to obtain substantial achievements, which must also be regularly evaluated.

12.2 HIV & AIDS+

A national strategy for prevention and control of HIV & AIDS in young Hondurans must be designed and have the participation of youth in the design, execution and follow-up.

This strategy must be sensitive to gender issues and must take the following into account:

- Achieve behavioral changes through education and communication;
- Create a favorable ambiance by placing HIV & AIDS prevention and control in a prominent position on the public agenda;
- Design policies and laws that promote access to information and good practices;
- Mobilize communities to obtain an active participation of parents, teachers and other adults so that the programs can achieve the legitimacy required for their success, and,
- Encourage the development of young Hondurans' capacities through a pertinent and quality education that creates the necessary conditions for inserting into the labor market, to generate income and stimulate the development of reflexive attitudes that allow youth to make decisions about their future in an independent, conscientious and responsible manner.

Recuadro 7

Strategies for the prevention of violence

Individual

Social development programs. Provide incentives to youths who are in a high risk of violence to complete their secondary education.

Relationship

Training parents in communication skills with their children. Home visitation. Mentoring program. Association between home and school to promote parental involvement. Family Therapy.

Community

Improve quality education and school infrastructure. Promote extracurricular activities to extend adult supervision. Implement gang prevention programs. Train health workers and other social workers to identify and refer youths in high risk of violence. Implement drug

prevention and rehabilitation programs. Improve access to housing. Build recreation areas and sports facilities. Improve quality and access to child care. Train community members and police forces in human rights. Introduce community police supervision.

Structural / Institutional

Establish a system of social security. Implement solid anti-poverty programs. Eliminate all discriminatory practices and laws. Reduce inequality of income and assets. Reduce violence in the media. Reform the education system. Improve access to health services. Create more and better jobs. Improve the legal system. Reduce the availability of weapons. Reduce drug trafficking. Launch public information campaigns. Strengthen and improve police and legal system.

Source: Buvinic, M., Morrison, a. and M. Shifter, "Violence in Latin America and the Caribbean: a Framework for Action", IDB 1999.

- Offer examples and spaces to develop communication and negotiation skills and to reject risky behavior.
- Use participatory education methodologies that actively engage young Hondurans and help them to personalize the information.
- Guarantee the duration of the programs, so that they achieve significant cultural changes.

12.3 Youth Violence

The basic problem of young Hondurans violence is not fighting the delinquents but preventing the youths from becoming delinquents. In this context, the hard handed policies are not the most adequate for preventing violence and juvenile delinquency because of their highly stigmatizing and segregationist's nature. Youth violence is a multi-factorial problem that requires measures at the individual, relational, community, institutional and structural levels.

The following are among the most important strategies to prevent youth violence:

- a. Generate opportunities to access quality education, decent employment and economic opportunities;
- b. Promote the development of favorable environments that encourage the participation of young Hondurans and of their communities in

Table 13

Actions to successfully address the problems of youth

Category	Weighted %
With a broad national consensus, with a vision that prioritizes youth issues	19.2
A new generation of politicians who are truly committed for the good of all	14.7
Formulating and implementing a national development plan for the long term, to be met even if governments change	13.1
Active citizenship, conscious of their rights and obligations	12.3
Ensuring that no one is above the law	10.4
Designing and implementing state policies that seek economic, social, political and cultural development	9.5
With an efficient, credible and transparent government	9.0
Promoting opportunities for dialogue among youth and adults in a spirit of shared responsibility	7.8
Promoting cultural understanding and equality between different sectors of society	4.1
Total	100.0

Source: Based on data from ENPDH 2008.

Table 14

How can the youth of Honduras contribute to the realization of a country fair and with opportunities for all?

Category	Weighted %
Being an active participant in society	20.5
Not being complaisant	14.2
Having ideals and striving to achieve them	13.7
Acting according to ethical and moral values and principles	9.9
Doing the best they can with what is dealt to them	9.7
Taking decisions responsibly	8.7

- the Project design, execution and evaluation, and,
- c. Make use of non conventional legal measures for the treatment of young Hondurans that are in conflict with the law.
 - d. Involve the communities of origin and media in the prevention of juvenile violence, since they have such a strong influence in forming the values and attitudes of the young population.
 - e. In the framework of social corporate responsibility, promote the participation of the private

sector in initiatives oriented toward preventing violence.

- f. Adopt and adapt the best prevention practices that have been successful in other latitudes to reduce violence. The following are some examples: i) The open schools in Brazil; ii) Promoting a Culture of Peace in Schools (UNESCO and Partners); iii) Youth Justice Systems and Alternative Measures for Freedom Deprivation in Costa Rica, and, iv) Youth Participation in the Social Monitoring of Public Policies.
- g. Promote the creation and strengthening of public spaces for community associability and encounter.

It is vital for citizens to gradually recover the spaces that have been overtaken by violence and insecurity.

13. Tools for a Plan of Action for Social Inclusion, Citizenship, and Human Development.

- Carry out a National Youth Survey every three or four years to keep a reliable assessment of young Hondurans' situation.
- Structure a National Network of Youth Information Centers that reaches youth and provides them with information they can use.
- Create a Permanent Observatory of Youth Policies that can promote and articulate the commission of specific studies and research and have a permanent and systematic follow-up of Youth Public Policies at all levels.
- Develop an institutional management and execution that seeks achievements in the inter-institutional actions for obtaining higher investments in the social, promotional and execution of economic and political measures that are coherent and will lead to a youth citizenship building and management capacity.
- Implement a coordination mechanism at inter-sector and inter-institutional levels in virtue of the existence and operational capacity of the different instances that inter-institutionally coordinate a series of actions dealing the different spheres of social exclusion.
- Incorporate the specific resources for implementing the measures for the agreed youth policies into the institutional budgets, deliberately trying to have an inter-sector focus. The financial planning of the proposals will be an important element to quantify the necessary resources for the proposals and to monitor them.
- Prepare policy strategies with young Hondu-

rans and from young Hondurans to contribute in their role as strategic agents of development, and that will encourage their participation in the design and proposal for action and change from their own needs and interests.

- Budgeting the Plan of Action –as we well know, institutionalism, a legal framework, and concrete and sufficient budget allocations are required to materialize a policy, a measure, or an action for any Plan of Action. In this regard, it is vital to incorporate the Youth Plan of Action proposed herein into the General Budget of the Republic.
- With young Hondurans and from young Hondurans, monitor and evaluate the impact of the initiatives to facilitate the social auditing process that can be developed with the involvement of young Hondurans so as to guarantee an effective impact of the programs and projects aimed at this population group.

14. Young Hondurans vision and commitment to Honduras.

This report has established that Young Hondurans are not indifferent and has confirmed that young Hondurans are interested in the common good, in addition to being fully capable of identifying the problems that affect them. In the 2008 ENPDH, young Hondurans pointed out that the core problems that limit the development of their potentials are: poverty (29.2%), delinquency and social violence (15.8%), drug use (12.4%) and the lack of opportunities to access a good job, credit, and capacity building to start their own business (10.9%).

The country’s youth also has a clear image of what is needed to face the problems of the country. As shown in Table 13, 19.2% identified the need of a national pact with a future vision that prioritizes the problems of youth; 14.7% made reference to how crucial it is to have a new generation of politicians that will genuinely commit to the common good; 13% thinks it is pertinent to formulate and put into action a long term national development plan that will be enforced regardless of whether it’s a new government; 12.3% noted the priority of an active citizenship, aware of its rights and duties, and 10.4% underlined the basics of guaranteeing the rule of law.

Beyond the concern of solving the problems that affect them, Young Hondurans are interested in contributing to improving their country and willing to work so that Honduras can become a more equal

Table 15

What kind of country should Honduras be, so that you and your children see in it an ideal place to live?

Category	Weighted %
With opportunities for everyone (education, health, employment, social security, etc.)	31.6
Where the corrupt are punished and there is transparency	16.0
Where there is respect for and implementation of the law, regardless of the economic and social status	15.7
A place where you don't live in fear of insecurity and violence	10.4
A place that recognizes the rights of youth, and youth assumes its responsibilities	5.5
Where the control and judicial institutions of the State are free of politics	5.4
Where there is sufficient space for public participation	5.4
Recognize young people as the present and future of the nation	3.6
Where there is no discrimination (gender, ethnic, etc.)	3.5
With residents proud of their traditions and culture	2.9
Total	100.0

Source: Based on data from ENPDH 2008.

country with opportunities for all. In this regard, 20.5% of the interviewed young Hondurans prioritized the active participation of young Hondurans in society; 14.2% identified the need of not being a conformist; and 13.7% referred to having ideals and striving to reach them (see Table 14).

The deep roots of many young Honduran’s are reflected when they express that Honduras is the place where they want to live in and where they want their children to live in. Concerning this, and according to Table 15, 63.3% of young Hondurans know there is an urgent need for Honduras to become a country with opportunities for all its citizens (31.6%); where the corrupt are punished (16%) and where there is respect and enforcement of the law, regardless of the economic and social condition of individuals (15.7%).

Notes:

1. This indicator shows the percentages of the country’s advance from 2000 to 2006, corresponding to reducing the gap between its human development index in the initial year and the maximum human development rate achievable (HDI = 1.000).
2. Between 2007 and 2009, the Primary Teaching Program has been universalized, reaching 400.000 students and 40.000 teachers. Due to the clearly achieved impact (even the pedagogic practices have been modified) its implementation is programmed for the secondary education level by the next government term, as of 2010. Further information is available in: www.ceibal.edu.uy.

Human Development Index by municipality, 2001/2003
